G H Raisoni College of Engineering and Management, Nagpur

(An Autonomous Institute affiliated to RTM Nagpur University Nagpur)

B. Tech First Year

Course Book 2025-26

First Year Engineering Department

Courses offered by

Applied Sciences & Humanities Board

(First Year Engineering Dept.)

Course Title: **Engineering Physics**										
Semester	I /II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/ Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	BSC2	1 Hr.	1 Hr.	2 Hrs.	3	10	15	50	25	--
Course Code	**BSBTSH2TT101AI/ CY/IT/EL BSBTSH1PI101AI/ CY/IT/EL BSBTSH2TT201CE/ DS/CV/ET/ ME BSBTSH1PI201 CE/DS/CV/ET/ ME**									
Teaching Mode	Offline	4 Hrs			Total	75			25	
Duration of ESE	2Hrs					100				

Course Objectives	1) Demonstration of the fundamentals of uniform and non-uniform electric and magnetic fields and working of related devices.
	2) Familiarization and demonstration of the concepts of laser and their applications.
	3) Explanation of working of various optoelectronic devices.
	4) Demonstration of the fundamentals of Quantum Mechanics and its related applications.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Identify the trajectories of electron in uniform Electric and Magnetic fields and operate related devices.
	CO2: Explain the working of Laser & use it for different applications
	CO3: Identify various optoelectronic devices and use them for various applications.
	CO4: Appraise the fundamental concepts, principles, theories, and terminology used in the Quantum Mechanics and solve related numericals.
	CO5: Demonstrate the knowledge of Physics involved in Quantum Computing.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
CO1	**3**	**2**	--	--	**3**	--	--	--	--	--	**1**
CO2	**3**	**2**	--	**3**	**2**	--	--	--	--	--	**1**
CO3	**3**	**2**	**2**	--	**3**	**1**	--	--	--	--	**1**
CO4	**3**	**2**	--	**3**	**1**	**--**	--	--	--	--	**3**
CO5	**3**		--	**2**	**2**	**2**	--	--	--	--	**3**

Course Contents:

Unit	Contents	Hours
I	**Electron Ballistics and Optics**: Trajectories of electron in uniform Electric and Magnetic field (Qualitative), Bethe‟s law, Electron Lens, Devices- Electron microscope (Theoretical), CRO.	6
II	**LASER:** Characteristics, Spatial and Temporal Coherence, Einstein Coefficient & its significance, Basic requirements of Laser, Components of laser, He-Ne, Semiconductor laser and Branch Specific applications, Pulse Laser Deposition	4
III	**Semiconductor Physics:** Band Theory of Solids, Hall Effect, and Optoelectronic Devices:-Types of optoelectronic devices, OLED, Photovoltaic Cell	5
IV	**Fundamentals of Quantum Physics:** Introduction to Quantum Mechanics, Dual nature of matter, phase velocity, synthesis of wave packet, group velocity,Heisenberg‟s Uncertainty Principle, Schrodinger‟s Mechanics, Equations, Operators, Particle in one dimensional box, tunneling.	6
V	**Applications of Quantum Physics:** Interaction of electron with matter, SEM, TEM, Quantum Computing: Physics involved in Quantum Computing: Reversibility, superposition, Quantum entanglement (Schrodinger‟s cat), Computations with Qubits. Quantum Logic Gates, Applications of Quantum Computing.	5

First Year Engineering Department

Text Books	1.	Fundamentals of Physics by David Halliday, Robert Resnick and Jerle Walker; John- Wiley and Sons, 2018, Eleventh Edition
	2.	Concepts of Modern Physics by Baiser et. al, Tata McGraw-Hill Education Pvt. Ltd, 2015, Twenty Ninth edition
	3.	Physics for Engineering, Dr. Bhavana P Butey, Oxford University Press, 2017, First Edition
EBooks	1.	https://www.phindia.com/Books/EBooks
Reference Books	1.	Quantum Mechanics by Leonard I Schiff, Tata McGraw-Hill Education Pvt. Ltd, 2014, Fourth Edition
	2.	Quantum Computation and Quantum Information, Michael A. Nielsen & Isaac L. Chua
	3.	Electronic Engineering Material and Devices by: John Allison (TMH),1971
Online TL Material	1.	https://nptel.ac.in/courses/104/104/104104085/

Sr. No.	Name of Experiments
1	Application of CRO: To measure the amplitude of AC voltage and determine unknown frequency using CRO
2	Application of CRO: Determination of phase difference between two AC signals.
3	Application of CRO: PN junction diode as a rectifier-Find efficiency & ripple factor by using CRO
4	Application of interference: Determination of diameter of thin wire using by measuring the width of the interference fringes produced by a wedge-shapedFilm.
5	Application of interference: Determination of radius of curvature of plano-convex lens by using Newton‟s rings.
6	Laser: Determination of Birefringence of double image prism.
	Laser: To determine (1) wavelength and (2) angular spread of He-Ne laser usingplane diffraction grating.
7	Determination of Hall Coefficient of an Extrinsic Semiconductor by arranging it in a Hall Effect. Experiment.
8	Determination of Band gap by four probe method.

9	Determination of Band gap of an Intrinsic semiconductor by using PN junction Diode
10	Comparison of V-I characteristics of various diodes.
11	Application of Diode: Determination of Planks Constant by using LED of at least 4 different colours.
12	Application of diode: Voltage regulation by Zener diode.
13	Application of diode: Plot V-I & power curves of solar cells, and find maximum power point & efficiency.
14	Application of diode: To show the tunneling effect in tunnel diode using I-V Characteristics.
15	Quantum Mechanics: Use Scilab to solve Schrodinger equation for ground state energy and wave functions of various simple quantum mechanical one- dimensional potentials.

Course Title: **Environmental Chemistry**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	BSC5	1 Hrs	NA.	2 Hrs.	2	10	15	50	25	--
Course Code	**BSBTSH1TT102CE/DS /CV/ME/ ET** **BSBTSH1P102CE/DS/ /CV/ME/ ET** **BSBTSH2TT202AI/CY/IT/ EL** **BSBTSH1P202AI/ CY/IT/EL**									
Teaching Mode	Offline	3 Hrs			Total	75			25	
Duration of ESE	2 Hrs					100				

Course Objectives	Demonstrate various methods of water treatment for domestic and industrial purpose.
	Explanation of different types of batteries and its commercial applications
	Demonstration and familiarization of impact of waste on environmental degradation.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Explain various methods of water treatment for domestic and industrial use
	CO2: Differentiate various categories of waste and its disposal techniques
	CO3: Identify various batteries and recognize its commercial applications
	CO4: Classify the different types of Energy and its future scope
	CO5: Apply the knowledge of environmental pollution and degradation tosolve related problems

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
CO1	**2**	**3**	**3**	**3**	**3**	**3**	**1**	**1**	**2**	**1**	**3**
CO2	**3**	**3**	**3**	**3**	**3**	**3**	**1**	**1**	**2**	**1**	**3**
CO3	**3**	**3**	**2**	**2**	**1**	**2**	**1**	**1**	**2**	**1**	**3**

CO5	**3**	**3**	**3**	**3**	**2**	**3**	**3**	**1**	**3**	**1**	**3**

Course Contents:

Unit	Contents	Hours
I	**Water Technology:** Purification of Domestic water, Boiler troubles (scale & sludge formation, caustic embrtillment), softening methods of industrial water (Lime-soda, Zeolite, & ion-exchange), Determination of hardness.	6
II	**Solid Waste Management and treatment Technology:** Solid waste and its Treatment: Collection, segregation, transportation and disposal. Different types of waste like e-waste, plastic waste, biomedical waste and Agriculture waste.	4
III	**Battery Technology:** Introduction to Battery, reversible and irreversible batteries. Examples: Dry cell, Lead-acid battery, Lithium-ion battery and fuel cell and applications.	4
IV	**Fuel Technology:** Solid Fuel: Characteristics, Significance of ultimate analysis of coal, concept of calorific value and its determination (GCV and NCV), Liquid Fuel: Fractional distillation of crude petroleum, Cracking of heavy oil, Gaseous fuel: composition, characteristics and applications.	4
V	**Pollution & its mitigation methods**:Causes, effects and controlling methods of air and water pollution.	4

First Year Engineering Department

Text Books	1.	Text Book of Engineering Chemistry, S S Dara, S Chand & company,2013, Eleventh Edition
	2.	Engineering Chemistry, Jain & Jain, Dhanpatrai&Dhanpatrai,2015,Sixteenth Edition
	3.	A Test Book of Environmental Chemistry & Pollution Control, S S Dara, S Chand & Co.,2006, Eleventh Edition
Reference Books	1.	Environmental Chemistry, B K Sharma and H. Kaur, Goel Publishing House, 2014, Fourteen Edition
	2.	Environmental Studies, R. Rajgopalan, Oxford Publication, 2016,Third Edition
E books	1.	Water purification, Alexandru Grumezescu, First edition https://www.elsevier.com/books/water-purification/grumezescu/978-0- 12-804300-4
	2.	Solid waste management by Stephen Burnley, Willey publication, 2014 https://onlinelibrary.wiley.com/doi/book/10.1002/9781118863923
	3.	Air Pollution, S K Agarwal, APH Publishing, 2005 https://books.google.co.in/books/about/Air_Pollution.html?id=dJlxyyLX0MoC

Online TL Material	1.	Introduction to Household Water Treatment and Safe Storage,https://www.coursera.org/learn/water-treatment/home/welcome
	2.	Electronic waste Management-Issues and challenges by Dr. Brajesh Kumar Dubey, http://nptel.ac.in/courses/120108005/
	3.	Integrated Waste Management for a Smart City ,https://onlinecourses.nptel.ac.in/noc19_ce31/course

First Year Engineering Department

List of Experiments

Sr. No.	Name of Experiments / Case Studies
1	Physical parameters of water- Determination of PH, turbidity and conductivity of given water sample.
2	Chemical parameters of water- Determination of Hardness by Complexometric method and Alkalinity by Warders Method.
3	Demonstration on different types of cells and batteries.
4	Determination of Moisture present in given Solid waste
5	Case study on current scenario of region specific waste generation.
6	Determination of Proximate analysis of Solid fuel as Coal.
7	Determination of Acid value of Liquid fuel.
8	Demonstration on measuring air quality by using Air Quality Tester.
9	Determination of chloride ions from given water sample by Argentometric Method.
10	Determination of DO of given water sample by Iodometric titration.
11	Preparation of Biodiesel from edible oil.
12	Determination of saponification value of liquid fuel.

First Year Engineering Department

Course Title: **Matrices & Differential Calculus**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	ODD	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	BSC1	2 Hrs	1 Hrs	NA	3	10	15	50	NA	NA
Course Code	**BSBTSH3TT103** **AI/CE/DS/CY/IT/ EL/CV/ME/ET**									
Teaching Mode	Offline	2 Hrs			Total	75			_	
Duration of ESE	2 Hrs.					75				

Course Objectives	To introduce concepts of matrices in the field of Engineering.
	To develop skills in student to solve engineering problems based onMatrices.
	To introduce concepts of Differential Calculus & Vector Calculus in the fieldof Engineering.
	To develop skills in students to solve applications based problems on Differential Calculus.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Understand and use the theory of Matrices to solve the system of linear equations and engineering problems in respective disciplines.
	CO2: Determine the Eigen values and Eigen vectors of a matrix and apply to various engineering problems in respective disciplines.
	CO3: Apply concepts of differentiation in solving engineering problems.
	CO4: Use applications of partial differentiation to solve various problems in engineering.
	CO5: Apply the Knowledge of vector differentiation to solve various problems in engineering.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

CO3	**3**	**3**	**2**	**2**	**1**	**1**	**1**	--	--	--	**3**
CO4	**3**	**3**	**2**	**2**	**1**	**1**	**1**	--	--	--	**3**
CO5	**3**	**3**	**2**	**2**	**1**	**1**	**1**	--	--	--	**3**

Course Contents:

Unit	Contents	Hours
I	**Matrices:** Review of Matrix, Solution of simultaneous equations by Gauss Elimination method. Inverse of matrix by Partitioning method. Rank of matrix, Consistency for system of linear equations, Linear dependence.	8
II	**Characteristics equation, Eigen values and its properties.** Eigen vectors. Reduction to diagonal form, Cayley Hamilton theorem (statement & verification). Sylvester‟s theorem, Association of matrices with linear differential equations of second order with constant coefficient.	9
III	**Differential Calculus of single variable function:** Review of limits, continuity, differentiability and Mean value theorem. Successive differentiation, Leibnitz‟s Theorem, Taylor‟s series and Maclaurin series for single variable function, Curve Tracing	7
IV	**Differential Calculus of function of several variables:** Functions of several variables, First and higher order partial derivatives, Euler‟s theorem, Chain rules. Jacobian, Hessian matrix properties of Jacobian, Maxima and minima of function of two variables, Lagrange‟s method of undetermined multipliers.	8
V	**Vector Calculus:** Differentiation of vectors, Gradient of a scalar pointfunction, Directional derivatives. Divergence and Curl of vector point function. Solenoidal and Irrotational vector field.	7

Course Objectives	To introduce the concepts of Integral calculus & Vector integration in the field of Engineering.
	To develop skills in students to apply the concepts of integrals in various engineering problems.
	To develop skills in students to solve problems of Ordinary Differential Equations and its applications in field of engineering.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Understand and use concept of integrals & solve engineering problems.
	CO2: Evaluate the multiple integrals using different techniques and apply it to solve engineering problems.
	CO3: Understand vector integration and its applications related to real life problems.
	CO4: Solve first order, first degree & higher order differential equations.
	CO5: Form differential equations for simple engineering systems and find its solution.

CO4	3	3	2	2	1	1	1	--	--	--	3
CO5	3	3	2	2	1	1	1	--	--	--	3

Course Contents:

Unit	Contents	Hours
I	**Integral Calculus:** Review: Area, Volume, Length, Surface area using simple integration, Volume of Solid of Revolution, Improper Integrals, Differentiation under integral sign.	7
II	**Multiple Integral:** Double integral, Change of variables, Change of order of integration, Triple integral, Applications of multiple integral: Area, mass,volume.	8
III	**Vector Integration:** Line integral, Surface integral, Volume integral, Statement of Gauss theorem, Greens theorem and Stokes theorem and its applications.	8
IV	**Differential Equations:** Linear, Reducible to linear and exact differential equations of first order. Higher order linear differential equations with constant coefficients (Cases of CF & PI).	8
V	Method of variation of parameters, Cauchy's and Legendre homogeneous differential equations. Applications of Differential equations.	8

First Year Engineering Department

Course Title: **Integral Calculus and Differential Equations & Numerical Methods**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	BSC3	2 Hrs.	1 Hr.	-	3	10	15	50	NA	NA
Course Code	BSBTSH3TT207CV									
Teaching Mode	Offline	3 Hrs.			Total	75			---- --- ---- ---	
Duration of ESE	2.5 Hrs					75				

Course Objectives	1. To introduce the concepts of Integral calculus in the field of Engineering.
	2. To develop skills in students to solve problems of Ordinary Differential Equations and its applications in field of engineering.
	3. To introduce concept of statistics.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Evaluate the multiple integrals using different techniques and apply it to solve engineering problems.
	CO2: Solve first order, first degree & higher order differential equations.
	CO3: Apply the knowledge of Numerical techniques to solve ordinary differential equations in engineering problems.
	CO4: Understand the solution techniques of linear Partial differential equations.
	CO5: Apply the concepts of least squares methods and linear regression analysis in engineering.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

Course Outcomes	Program Outcomes and Program Specific Outcomes										
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11
CO1	**3**	**3**	2	2	**1**	**1**	**1**	-	-	-	**3**

CO5	**3**	**3**	**2**	**2**	**1**	**1**	**1**	-	-	-	**3**

Course Contents:

Unit	Contents	Hours
I	Multiple Integral: Double integral, Change of order of integration, Triple integral, Applications of multiple integral: Area, mass	**7**
II	Differential Equations: Linear, Reducible to linear and exact differential equations of first order. Higher order linear differential equations with constant coefficients (Cases of CF & PI). Applications of Differential equations(First Order)	**7**
III	Numerical Methods: Solutions of algebraic and transcendental equations by False position method and Newton-Raphson method Numerical solution of ordinary differential equation by Taylor series method, Euler modified method, Runge - Kutta method of 4 th order. Solution of simultaneous linear equations by Gauss Seidel method	**6**
IV	Partial differential Equations: Partial differential equation of first order & first degree, Solution of Higher order Partial differential equations with constant coefficients	**6**
V	Statistics: Introduction to measures of central tendency, Curve fitting Least Square method, Correlation and Regression.	**6**

First Year Engineering Department

Course Title: **Communication Skills**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/ Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	AEC1	1 Hr	--	2 Hrs.	2	10	15	--	25	--
Course Code	**AEBTSH1TI 108AI/CY/IT/CV/ ME AEBTSH1PI108 AI/CY/IT/CV/ ME AEBTSH1TI 208CE/DS/EL/ET AEBTSH1PI208 CE/DS/EL/ET**									
Teaching Mode	Offline	3 Hrs.			Total	25			25	
Duration of ESE	NA					50				

Course Objectives	To introduce the students on the importance of Communication Skills in Engineering
	To build up the Basic Communication Skills of the students through Listening, Speaking, Reading and Writing
	To carve the body language of the students on their effective presentation as and when required before audience.
	To augment the presentation skills of the students of their Technical Proficiency through effective PPTs
	To enhance the creativity of the students through activities like Creative Writing, Extempore
Course Outcome	**At the end of the course :-**
	Students shall identify and comprehend the main ideas through Comprehensive and Critical Listening and respond appropriately to the questions using "Eyes-Mind-Ears" technique.
	Students shall be strongly opinionated, thoughtful and shall speak confidently on any given random topic (Extempore)
	Students shall predict main ideas from titles and visual aids by using Skimming and Scanning techniques of Reading Comprehension and Charts.
	Students shall organize and present their email and letter writing for college Correspondence in a coherent way.
	Students shall plan, organize and prepare an effective presentation by Implementing the audience centric delivery styles with appropriate visual aids.

First Year Engineering Department

Course Contents

Unit	Contents	Hours
I	**Elevation to the Course:** Ice-Breaker: Self Introduction by Students online - Introduction to the course Briefing on the syllabus, learnings, outcome and Assessment Patterns - Pre-Training Module: Pre-Assessment on the Existing English Proficiency of the Students	3
II	**Communication Skills and "YOU"** Introduction to English Communication skills and Cognizance in English -Self-Realization – Review on SWOC Analysis and self- Introspection SMART Goals-Preparation and presentation of Individual goal charts	3
III	**The Practical Approach to Basic Communication Skills through LSRW -*In par with Basic and Intermediate levels Academic English like IELTS, TOEFL, ESL*** **Listening Skills**: Comparison of Listening skills assessment at schools and listening skills from now on to improve communication skills/ The Key Elements and the focus towards distraction/ 3 P"s of listening/ Comprehensive Listening: Understanding the message and the sound (Gap Fill Exercise/ Note/Form/Sentence Completion Exercise) Critical Listening: Evaluating the message and the sound (Short Answer Questions/Listen and Label)- Strategies to effective listening Skills: Practice series of Listening skills Exercises - **Speaking Skills**: Extempore Speaking/ Three Vital Components/ Techniques Involved to speak- Do"s and Don"ts"/ Sample Videos of extempore presentations and review by students for self- Realization- **Reading Skills:** Reading Styles/Strategies to Reading/ Reading Comprehension (Exercise of Match the heading/Yes-No-Not Given/Read and Fill/- Reading Charts- Trends- Adverbs-Prepositions)	7
IV	**Formal Correspondence and Creative Content Framing** Introduction to formal Writing techniques- Difference between Formal and Informal Writing- Formats in Formal Mails and letters- Words and phrases to be avoided in Formal Correspondence- Email and Letter writing scenarios in College correspondence- **Creative Writing-** Skills exposed in Creative Writing-Types of Writing-Developing contents on a prompt- Creative Writing Practice	4
V	**Presentation skills for Engineers** Structure of Presentations-Use of aids like Power point- Do"s and Don"ts of presentation-Types of presentation- Body Language during presentation- The practical execution of Presentation skills (Individual and Technical) along with review and feedback **Non-verbal Communication** Difference between Verbal and Non-verbal Communication-Physical Appearance-"Do Looks really Matter?"- Body Language - Tips for improving Non-verbal communication (Gesture/Posture/Facial Expression/Personal Appearance/ Eye contact)	3

First Year Engineering Department

Text Books	1.	Communication Book for Budding Professionals by Sindhu Panikar and Priyanka Sharma (Edition 2 - 2021)
E--Books	1.	Bridging the Soft Skills Gap, Bruce Tulgan
Reference Books	1.	Soft Skills for enhancing Employability (Connecting Campus to Corporate) , M S Rao
	2.	Communication Skills for Technical Students, Mr. Farahatulla
Online TL Material	1.	Online Lectures/Exercises/Assessment/Evaluation/Quizzes shall be made available with extended learning

Sr. No.	Name of Activities
1	**Listening Skills**: *Comprehensive Listening : Gap Fill Exercise/ Form, Note, Sentence Completion *Critical Listening : Short Answer Questions/ Listen and Label
2	**Speaking Skills**: *Extempore Speaking
3	**Reading Skills**: *Reading Comprehension: Match the headings/ Yes, No, Not Given Statement/ Read & Fill * Reading Charts
4	**Writing Skills:** * Formal Correspondence: Email and Letter writing for college Scenarios * Creative Writing with quotes, statements and a Picture prompt
5	**Presentation Skills :** *PPT designing Beginner level with Vision Board (Goal Setting) * Oral Presentation with Professional Body Language

Elective: Indian Knowledge System Course List (IKS)

Course Title: Indian Knowledge System (IKS): Concepts and Applications in Engineering										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/ Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	IKS	2 Hr	--	--.	2	10	15	50	--	--
Course Code	**IKBTSH2TT109 AI/CY/IT/CV/ET** **IKBTSH2TT209 CE/DS/ME/EL**									
Teaching Mode	Offline	2 Hrs.			Total	75				
Duration of ESE	NA					75				

Course Objectives	To make the students understand the rich heritage of our traditions
	To give the students a platform to expose to the dynamic function in Indian knowledge System
	To enhance the knowledge of Sanskrit in getting to the roots of philosophical concepts.
	To inspire the students to learn and appreciate the origin and development of Indic thought and practices from ancient to current times.
	To give students insight of practices that will prepare one for the inner-journey to discover the Self

Course Outcomes	Students will be able
	1. To understand significance of Indian knowledge and heritage.
	2. To be equipped with the scientific functions and methodology of Vedas.
	3. To learn and practice number system, mathematical calculations.
	4. To understand structure and usage of metal and metalworking.
	5. To understand ancient concepts and applications of Engineering Technology.

Course Syllabus

Indian Knowledge System (IKS): Concepts and Applications in Engineering

Unit	Content	Hours
Unit 1	**Indian knowledge System :** Introduction to the Course, Introduction to IKS, IKS in Action, The IKS Corpus –A Classification Framework, Historicity of IKS, Salient Aspect of IKS.	4 Hours
Unit 2	**The Vedic Corpus:** Introduction to Vedas, A synopsis of the four Vedas, Sub –classification of Vedas, Messages in Vedas, Introduction to Veda gas, Prologue on Siksa and Vyakarana, Basic of Nirukta and Chandas, Intoduction to Kalpa and Jyotisa, Vedic Life: A Distinctive Features.	4 Hours
Unit 3	**Number systems and Units of Measurements:** Number systems in India-Historical Evidence, Salient aspects of Indian Mathematics, Salient aspects of Indian Mathematics part-2, Bhuta-samkhya system, Measurements of time, distance, and weight, Pingala and Binary System. **Mathematics:** Introduction to Indian Mathematics, Unique aspects of Indian Mathematics, Inidan Mathematician and their contributions, Algebra, Geometry, Trigonometry, Binary mathematics and combinatorial problems in Chandah Sastra, Magic squares in India.	8 Hours
Unit 4	**Engineering and Technology: Metals and Metalworking:** The rise and fall of a great Indian technology, Mining and ore extraction, Zinc Extraction Copper and its alloys, Iron and steel in India, Lost wax casting of idols and artefacts, Apparatuses used for extraction of metallic components.	4 Hours
Unit 5	**Engineering and Technology: Other Applications:** Science and Technology Heritage, Science and Technology Heritage: Literary sources, Science and Technology Heritage: Physical structure, Science and Technology Heritage: Temples, Science and Technology Heritage: Watershed Management, Dyes Painting and Perfumes, Surgical techniques Shipbuilding, Status of Indigenous S & T.	4 Hours

First Year Engineering Department

Course Title: **Indian Knowledge System (IKS): Social History of Medicine In Colonial India**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/ Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	IKS	2 Hrs	--	--	2	10	15	50	--	--
Course Code	**IKBTSH2TT110 AI/CY/IT/CV/ ET IKBTSH2TT210 CE/DS/ME/ EL**									
Teaching Mode	Offline	2 Hrs.			Total	75				
Duration of ESE	NA					75				

Duration :8 Weeks **Course Layout**	
Week 1:	Introduction: Significance of medicine in the colonial context - Colonial understandings of Indian landscape, diseases and causations - Initial attitudes towards indigenous systems — Concerns about survival and initial medical measures
Week 2:	The IMS (Indian Medical Service) - Medical Departments - Enclavism - Shifts in the discourses on race, climate and diseases - Hill stations and Sanatoria - Medical Education
Week 3:	From White personnel's health to "Native" and Public Health - Challenge of Epidemics (Smallpox, Malaria, Cholera, Plague), Sanitary Measures, Challenges of International Trade and Politics
Week 4:	Local Response - Compliances and Resistances - Cultural challenges - Volunteer Associations – Role of media and local intelligentsia
Week 5:	Tropical Paradigm - Tropical Diseases and Tropical Medicine; Medical Research – Emergence of Bacteriological and other Research Institutions – Malarial and other field surveys/researches - Vaccine Research and Production
Week 6:	Colonial Medicine and Women – Zenana Missions, Lock Hospitals, Scientific Midwifery, Nursing, Women's Medical Institutions, Women's Medical Service (WMS).
Week 7:	Non-State initiatives – Setting up of funds, dispensaries, hospitals and colleges through private philanthropy – Role of Missionaries
Week 8:	Western versus Indigenous Systems – Revivalist movements - Professionalization of indigenous systems - Standardization of texts and drugs -Commercialization.

Duration of ESE	NA					75				

Duration :8 Weeks **Course Layout**	
Week 1:	Introduction: Why are ancient Indian science and technology relevant today? What is science? How is it different from technology? Philosophy of ancient Indian technology, how is different from modern technology? Ancient Indian Scientific methods.
Week 2:	Philosophy of ancient Indian technology, how is different from modern technology? Ancient Indian Scientific methods
Week 3:	Glimpses of ancient Indian science and technology?
Week 4:	Material Technology : Mining, Metals and Metallurgy, Iron Making and craftsmanship, Wootz Steel Technology
Week 5:	Extraction of Zinc in ancient India, Glass making, Bead making Techniques, Ceramic Technology
Week 6:	Water Harvesting Technology, Irrigation Systems
Week 7:	Town planning, Building construction, Sanitation
Week 8:	Agriculture and Textile Technology

First Year Engineering Department

Course Title: **Indian Knowledge System (IKS): Introduction to Modern Indian Drama**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/ Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	IKS	2 Hr	--	---.	2	10	15	50	--	--
Course Code	**IKBTSH2TT118 AI/CY/IT/CV/ET** **IKBTSH2TT218 CE/DS/ME/EL**									
Teaching Mode	Offline	2 Hrs.			Total	75				
Duration of ESE	NA					75				

Duration :8 Weeks **Course Layout**	
Week 1:	Introduction to the course: general outline & methods: colonial-nationalist debates on the form and function of theatre; Parsi Theatre; the politics of performance and gender: the roles and lives of early male actors and their performance of femininity. The interlinkages and competition between cinema and theatre; other forms of folk and street theatre; the themes of early modern theatre that incorporated folk, puranic and nationalist themes. Overview of early Indian Playwrights: Bankim Chandra Chatterjee, Bhartendu Harishchandra and Rabindranath Tagore; Introduction to Post-Independence Theatre, Some Early Figures: Ebrahim Alkazi, BV Karanth, Badal Sircar, Utpal Dutta, Habib Tanvir,Vijay Tendulkar, Mahesh Elkunchwar, Girish Karnad and Mahesh Dattani
Week 2:	Vijay Tendulkar's Plays: Social Critique of various sites of institutional power and violence like the patriarchal family, the state,courts of law and performance spaces. Plays include Silence! The Court is in Session, Ghashiram Kotwal, and A Friend's Story
Week 3:	Continuation of Vijay Tendulkar: Kanyadaan and summary of Tendulkar. Introduction to Girish Karnad: On his modern adaptations of the Indian Puranas and folktales, his satires of the alienation and disillusionment in modern Indian society and politics, questions of gender and sexual subjectivity. Plays include Hayavadana, Tughlaq.
Week 4:	Continuation of Girish Karnad: Dreams of Tipu Sultan, Fire and the Rain, Broken Images. Summary of Karnad

Week 5:	Introduction to Mahesh Elkunchwar: On themes of modern alienation of the individual and mortality, religion, gender and sexuality in urban Marathi theatre, experimental and absurdist and expressionist theatre, his intellectual links with Vijay Tendulkar.Plays include Garbo, Desire on the Rocks, The Old Stone Mansion.
Week 6:	Continuation of Mahesh Elkunchwar: Sonata. Summary of Mahesh Elkunchwar. Introduction to Mahesh Dattani: Radio plays, one-act plays, and long plays, non-normative desires and sexual subjectivity, his critique of the patriarchal family and the state, the fraught intersections of gender, sexuality and communalism in his plays, Final Solutions, Bravely Fought the Queen
Week 7:	Continuation of Mahesh Dattani: Dance like a Man. Summary of Mahesh Dattani. Introduction to Badal Sircar: satires of human politics, urban alienation, theatre and human rights activism, political theatre for the socially marginalized, and Sircar's contribution to the foundations of political theatre. Plays include Procession, Bhoma.
Week 8:	Continuation of Badal Sircar: Stale News and Conclusion.

Teaching Mode	Offline	2 Hrs.			Total	75				
Duration of ESE	NA					75				

Duration :8 Weeks **Course Layout**	
Week 1:	Changing Definition of Folk and Minor Art Timelines and Regions: General Mapping Traditional Roots: Elements and Principles Timelessness: Primitive Connection Evolution in Purpose: Ritualistic to Propagative Contemporary Practice
Week 2:	Classification and Connections: Traditional Roots Early Literary Resources Mythical Associations Idea of Nationalism and Modernism in the Context of Folk Art-I & II Relevance of the Art Practice
Week 3:	Contextualization and Decontextualization Concept of Communication for Social Purpose Aesthetic Perspective Secularity and Religious Plurality Ethnographic perspective on the study of Folk Art and Culture About the Exponents who brought the culture under the Limelight
Week 4:	Commonality and Congruity in the Diverse Content of Art School of Art in Madhubani Painting Art as a Feminine Preserve vs the Male painters of Madhubani Yamapata, Pytkar and other art practice of Jharkhand: Yamapata by the Jadopatias, Sohari Painters and their Art Patachitra of Bengal Patachitra of Odisha

Week 5:	Continuum of the Practice: Ancient Centres, Contemporary Scenario, Method and Material – 1 Continuum of the Practice: Ancient Centres, Contemporary Scenario, Method and Material – 2 Continuum of the Practice: Ancient Centres, Contemporary Scenario, Method and Material – 3 Case study - 1: Gond Art Case study - 2: Bengal Patachitra Case study - 3: Madhubani Paintings
Week 6:	Characteristics of Contemporary Collection- Semiotic Analysis Characteristics of Contemporary Collection- Thematic and Iconic Analysis Characteristics of Contemporary Collection of Indian Folk and Minor Art Thematic Change in Contemporary Collection of Indian Folk and Minor Art Individual Expression in Contemporary Collection of Indian Folk and Minor Art
Week 7:	Cultural Condition: Colonial and Postcolonial Bengal - Part I Cultural Condition: Colonial and Postcolonial Bengal - Part II Contextualizing Folk idiom - Part I Contextualizing Folk idiom - Part II Contextualizing Folk idiom - Part III
Week 8:	Coexistence and Collaborations with Mainstream Art Alternative Context: Place of Folk Art in Contemporary Lifestyle Need of Paradigm Shift – I Need of Paradigm Shift – II Endnote

Course Title: **Integrated Personality Development-I**

First Year Engineering Department

Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd	Theor y	Tutorial	Practical	Credits	TA E	CA E	ESE	INT	EXT
Course Category	CC1	-	-	4 Hrs	2	-	-	-	25	25
Course Code	CCBTSH2PT112AI/CE/DS/CY/IT/CV/ME/EL/ET									
Teaching Mode	Offline	4Hours			Total	-			50	
Duration of ESE	NA					50				

Course Objectives	To provide students with a holistic value-based education that will enable them to be successful in their academic, professional, and social lives.
	To give the students the tools to develop effective habits, promote personal growth, and improve their well-being, stability, and productivity
	To allow students to establish a stronger connection with their family through critical thinking and development of qualities such as unity, forgiveness, empathy, and effective communication.
	To provide students with soft skills that complement their hard skills, making them more marketable when entering the workforce
	To inspire students to strive for a higher sense of character by learning from role models who have lived principled, disciplined, and value-based lives.

Course Outcome	Students will learn to visualize their future goals and will structure their lives through smart goals to give themselves direction and ultimately take them to where they want to go
	Students will explore the detrimental effects of addictions on one's health, personal life, and family life. They will learn how to take control of their life by becoming addiction free.
	Students will understand the importance and benefits that forgiveness plays in their personal and professional life. They will learn to apply this knowledge in realistic situations.
	Students will learn the six steps of teamwork and harmony that are essential for students' professional and daily life. Students will explore a new approach to leadership, through humility
	Students will learn to cope with current and future causes of stress. They will develop a variety of practical financial skills that prepare them to become financially stable throughout their future careers.

First Year Engineering Department

Topic	Reference Books
Restructuring Yourself/ Power of Habit/Being Addiction-Free/ Handlingthe Devil - social media	• Power of Habit, Charles Duhigg, Random House Trade Paperbacks, 2014 • The Seven Habits of Highly Effective People, Stephen Covey, Simon & Schuster, 2013 • Atomic Habits, James Clear, Random House, 2018
ssFailures are not AlwaysBad	• Born Again on the Mountain: A Story of Losing Everything and Finding It Back, Arunima Sinha, Penguin, 2014 • Failing Forward: Turning Mistakes into Stepping Stones for Success, John C. Maxwell, Thomas Nelson, 2007
Teamwork & Harmony/Networking - Decision Making - Leadership	• The 17 Indisputable Laws of Teamwork, John Maxwell, HarperCollins, 2013 • Predictably Irrational, Revised and Expanded Edition: The Hidden Forces That Shape Our Decisions, Harper Perennial, Dan Ariely, 2010
Basics of Financial Planning	• Rich Dad Poor Dad, Robert Kiyosaki, Plata Publishing, 2017 • The Intelligent Investor, Benjamin Graham, Harper Business, 2006
Forgive & Forget/ Listening and Understanding	• "What Makes a Good Life? Lessons from the Longest Study on Happiness", R. Waldinger, Ted Talks, 2015

First Year Engineering Department

Course Title: **Liberal Learning Course-I-Government Missions (Study of any 2)**										
Semester	I/II	**Teaching Scheme**				**Evaluation Scheme**				
						Theory			Practical	
Term	Odd	Theor y	Tutorial	Practical	Credits	TA E	CA E	ESE	INT	EXT
Course Category	CC1	-	-	4 Hrs	2	-	-	-	25	25
Course Code	**CCBTSH2PT126AI/CE/DS/CY/IT/CV/ME/EL/ET**									
Teaching Mode	Offline	4Hours			Total	-			50	
Duration of ESE	NA					50				

Course Objectives	Develop understanding of key Government Missions, schemes, and their societal relevances
	Build awareness of national developmental priorities and citizen responsibilities.
	Enhance students' ability to evaluate the impact of Government Missions on communities.
	Promote active civic engagement through responsible participation in Government-led initiatives.
	Empower learners to contribute meaningfully to national development goals.

Course Outcome	**CO1:** Understand the fundamental objectives and frameworks of major Government Missions
	CO2: Analyze the societal, economic, and environmental impact of Government Mission initiatives.
	CO3: Demonstrate awareness of citizen roles, responsibilities, and participatory governance.
	CO4: Apply learned concepts to promote community engagement aligned with Government Missions.
	CO5: Exhibit a sense of civic responsibility and contribute positively to national development programs.

List of Experiments

Sr.No	Content
1	Introduction about Government Missions
2	Objective of Government Missions (Any Two)
3	Contribution towards Government Development
4	Agenda of study
5	Analysis of the projects
6	Statistics of overall analysis
7	Overview of the whole project plans
8	Conclusion and future scope

First Year Engineering Department

Course Title: Liberal Learning Course-I-Study of India's Top 2 Problems										
Semester	I/II	**Teaching Scheme**				**Evaluation Scheme**				
						Theory			Practical	
Term	Odd	Theor y	Tutorial	Practical	Credits	TA E	CA E	ESE	INT	EXT
Course Category	CC1	-	-	4 Hrs	2	-	-	-	25	25
Course Code	**CCBTSH2PT169AI/CE/DS/CY/IT/CV/ME/EL/ET**									
Teaching Mode	Offline	4Hours			Total	-			50	
Duration of ESE	NA					50				

Course Objectives	Identify and understand major contemporary challenges in India
	Analyze stakeholders and evaluate existing interventions
	Use data and evidence to interpret the severity of issues
	Develop practical, innovative, and feasible solutions
	Build research, presentation, and problem-solving skills

Course Outcome	**Students will be able to**
	CO1: Identify and explain key national challenges
	CO2: . Analyze stakeholders and evaluate current initiatives
	CO3: Interpret and present data to support arguments
	CO4: Examine real-world case studies to draw meaningful conclusions
	CO5: Propose practical and innovative solutions to contemporary challenges & Communicate findings confidently through structured presentations.

CO3						**3**			**2**		
C04											**1**
C05									**3**		

Sr. No.	Content
1	Introduction to India's Problems
2	Objectives behind the study of any two problems
3	Key events chosen for analysis
4	Initiatives targeted for study
5	Framework and matrix
6	Comparative study and creative framework
7	Summary and problem- solving techniques
8	Future scope of solution

First Year Engineering Department

Course Title: **Liberal Learning Course-I-Study of one of the identified Books**										
Semester	I/II	**Teaching Scheme**				**Evaluation Scheme**				
						Theory			Practical	
Term	Odd	Theor y	Tutorial	Practical	Credits	TA E	CA E	ESE	INT	EXT
Course Category	CC1	-	-	4 Hrs	2	-	-	-	25	25
Course Code	**CCBTSH2PT169AI/CE/DS/CY/IT/CV/ME/EL/ET**									
Teaching Mode	Offline	4Hours			Total	-			50	
Duration of ESE	NA					50				

Course Objectives	To understand the author's background and the context in which the book was written
	To develop comprehension and summarization skills.
	To analyze important characters, ideas, or arguments in the book.
	To critically evaluate the book.
	To enhance communication and collaborative learning.
	To reflect on personal learning and value addition.

Course Outcome	**Students will be able to**
	CO 1 To cultivate reading habits through the structured study of a selected book
	CO2 To improve comprehension by understanding key ideas, themes and messages present in the text
	CO3 To analyze the author's style and techniques to enhance critical and reflective thinking
	CO 4 To enhance presentation techniques through reflections, reviews and insights in oral or written structure
	CO5 To relate with the society and understanding various cultures or motives of the author's surrounding

C05							**3**	**3**	**2**		**3**

Sr.No.	Content
1	Select one book from the identified list
2	Study the author's life, ideology, and historical/social background
3	Write a brief profile and explain how it influences the book.
4	Identify two major characters or concepts.
5	Support analysis with textual references.
6	Identify major themes and sub-themes
7	Present findings using a concept map or short write-up.
8	Identify current social, ethical, or national issues connected to the book.
9	Review the book's strengths, limitations, and writing style.
10	Conduct a group discussion or seminar on key learnings from the book.
11	Write a reflective essay on how the book influenced personal thinking, values, or perspectives.

First Year Engineering Department

Course Title: **Liberal Learning Course-II-Innovation and Creativity.**										
Semester	I/II	**Teaching Scheme**				**Evaluation Scheme**				
						Theory			Practical	
Term	Odd	Theor y	Tutorial	Practical	Credits	TA E	CA E	ESE	INT	EXT
Course Category	CC1	-	-	4 Hrs	2	-	-	-	25	25
Course Code	**CCBTSH2PT271AI/CE/DS/CY/IT/CV/ME/EL/ET**									
Teaching Mode	Offline	4Hours			Total	-			50	
Duration of ESE	NA					50				

Course Objectives	To explain the fundamental concepts of creativity and highlight its importance in fostering economic development
	To outline and apply various models and mechanisms of creative problem solving for addressing real-world challenges.
	To interpret creative intelligence, abilities, and thinking strategies that enhance innovative and analytical thinking
	To formulate appropriate innovative ideation methods for generating feasible and effective solutions.
	To identify and analyse innovation using a systems approach from both micro and macro perspective

Course Outcome	**Students will be able to**
	CO1 Explain concepts and importance of Creativity for economic development.
	CO2 Outline various models and mechanisms of creative problem solving.
	CO3 Interpret creative intelligence abilities and thinking strategies
	CO4 Formulate an Appropriate innovative ideation methods.
	CO5 Identify the system approach to Micro and Macro Perspective of Innovation

Course Outcome	Program Outcomes

1	Understanding creativity and new innovation angles
2	Objective of study
3	Design thinking process
4	Techniques required for sampling
5	Organizing ideas
6	Methods and brainstorming process
7	Problem solving skills
8	Budget and overall statistics

Course Title: Liberal Learning Course-II-Making Short Film or Photography.

Semester	I/II	**Teaching Scheme**				**Evaluation Scheme**				
						Theory			Practical	
Term	Odd	Theor y	Tutorial	Practical	Credits	TA E	CA E	ESE	INT	EXT
Course Category	CC1									

First Year Engineering Department

Course Code	**CCBTSH2PT273AI/CE/DS/CY/IT/CV/ME/EL/ET**	-	-	4 Hrs	2	-	-	-	25	25
Teaching Mode	Offline				Total	-			50	
Duration of ESE	NA	4Hours				50				

Course Objectives	To provide fundamental knowledge of camera operations and photographic principles
	To develop the ability to apply composition and lighting techniques for effective visual capture
	To introduce basic videography skills including camera handling, shot techniques, and audio recording
	To enable students to use digital editing tools for enhancing photos and videos.
	To foster creativity and technical skills by producing and presenting a short film project.

Course Outcome	**Students will be able to**
	CO1: Understand basic concepts of photography and camera handling.
	CO2 : Apply composition and lighting techniques to capture quality photographs
	CO3 : Use basic video production skills for creating short films.
	CO4: Edit photos and videos using digital editing tools
	CO5 : Produce and present a short film demonstrating creative and technical skills.

First Year Engineering Department

List of Practical's

Practical No.	Title of Practical	Aim
1	Basic Camera Handling & Settings	To understand camera functions such as ISO, shutter speed, aperture, focus, and white balance.
2	Composition Techniques in Photography	To learn and apply composition rules like rule of thirds, symmetry, leading lines, and framing.
3	Lighting Techniques in Photography	To study the effect of natural and artificial lighting on image quality.
4	Portrait & Object Photography	To capture portraits and objects using proper angles, focus, and background techniques.
5	Video Shooting Basics	To learn basic cinematography including panning, tilting, zooming, and shot types.
6	Audio Recording & Syncing	To record clear audio and synchronize it with video footage.
7	Photo & Video Editing Basics	To perform basic editing of photos and videos using digital editing software.
8	Final Short Film Project	To apply all learned techniques to create a complete 2–3 minute short film.

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Casting Process:** Introduction, pattern making: types, materials used, pattern making allowances, color codes, core making: types of cores, classification of casting, casting processes (Investment, Die & Centrifugal), riser, runner.casting defects. Moulding: types of sand mould.	06
II	**Forming Processes:** Advantages and drawbacks, hot and cold rolling, wire drawing, forging, extrusion, embossing, etc., sheet metal working process & sheet metal operations.	06
III	**Joining Processes:** Introduction to welding processes, Types of welding. Arc welding (TIG, MIG, Submerged Arc, Metal arc), Gas Welding	06
IV	**Processing of Plastics:** Thermosetting and thermo plastics, General plastic processes: injection moulding, compression molding, transfer molding, blow molding.	06
V	**Powder Metallurgy:** Powder manufacture and conditioning, production of sintered structural components, cemented carbides, ceramics, sintered carbide cutting tools. Advanced topics	06

Text Books	1.	Manufacturing Technology (foundry Forming and Welding) by P.N. Rao, TMH education, Fourth edition, and 2006.
	2.	Workshop Technology (Volume I)", by Hajra Chaudhary, Media Promoters and Publishers, 2007.
	3.	Manufacturing Science by Ghosh and Malik Affiliated East-West Press Private Limited, 2010.
	4.	Manufacturing Engineering and Technology", by S. Kalpak Jain and S R Schmidt, Wesley.
E-Books	1.	Introduction to Basic manufacturing processes and Workshop Technology by Rajender Singh ,New Age International
	2.	Fundamentals of Modern Manufacturing, Materials, Processes, and systems by Mikel P. Groover, Fourth edition, John Wiley and Sons
Referenc eBooks	1.	Sheet metal forming processes and dies design by Vukota Boljavonic, Industrial Press, and New York.

Teaching Mode	Offline	4 Hrs.			Total	75			25	
Duration of ESE	2 Hrs					100				

Course Objectives	It helps students to understand importance of biological concepts in engineering fields.
	To understand application of engineering concepts in medical instrumentation.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Understand Human anatomy
	CO2: Able to apply appropriate biosensor
	CO3: Relate various applications of Biomedical instrumentation with safety standards.
	CO4: apply and suggest diamagnetic medical instruments
	CO5: Analyses and apply various biomedical diagnostic methods.

Teaching Mode	Offline	4 Hrs.			Total	75			25	
Duration of ESE	2.5 Hrs.					100				

Course Objectives	To identify the various elements of building and material.
	To describe methods and techniques used for various types of construction work.
	To define terminologies associated with Building & its Functional Facilities.
Course Outcomes	**CO1**: Define types of Foundation and basic requirements for building.
	CO2: Identify various components of construction of Building.
	CO3: Select appropriate material for building construction.
	CO4: Examine requirements in various construction related activities and their quality control.

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Foundations:** Necessity and types of R.C.C. foundations, Detail of Deep foundation and precast foundation in general, Details shallow foundations.Bearing capacity of soils and its assessment.	8
II	**Brickwork:** Qualities of good bricks, classification of bricks tests on bricks as per as codes. Terms used in brickwork, commonly used types of bonds in brickwork such as header, stretcher, English and Flemish bonds, principles of construction. Reinforced brickwork, brick knogging. Parapets, copings, sills and corbels, brief introduction to cavity walls, load bearing and partition walls. Masonry construction using cement concrete blocks and clay walls, load bearing and partition walls. Masonry construction using cement concrete blocks and clay blocks. Precast construction: Introduction to method and materials. Precast elements like poles, cover, jallies, steps corbets, truss element etc.	8
III	**Stone Work:** Stones, cutting and dressing, selection of stones types of stone masonry, principles of construction joints in masonary. Lifting heavy stones, **Arches and Lintels:** Terminology in contraction, type‟s chajjas and canopies, precast Lintels & Arches. **Damp Proofing:** Causes and effect of dampness. Various methods of damp proofing Damp proofing in plinth protection, New Techniques of Damp proofing. Epoxy etc.	8
IV	**Floors and Roofs:** Floors: General Principals, types and method of construction, floors finished quality, testing floor tiles, synthetic & Ceramic Tiles. Roofs: Flat and pitches roofs, roof coverings, types AND their constructional features. Thermal Insulation **Stairs:** Types of stairs, functional design of stairs. **Doors and Windows:** Purpose materials of construction and types.	8
V	**Plastering and Pointing:** Necessity, types and methods **Temporary Timbering:** Centering and formwork shoring, underpinning and scaffolding. **Painting:** White washing, colour washing and distempering new materials & Techniques.	8

Sr. No.	Name of Experiments / Case Studies
1	To study the various construction Material
2	To Draw the Sign & Symbols of the various construction Material & Building Component
3	To Draw the Sketches of different types of Foundations
4	To Draw the Sketches of different types of bonds in Brickwork
5	To Draw the Sketches of different types of bonds in Stonework
6	To Draw the Sketches of different types of Lintels & Arches
7	To Draw the Sketches of different types of Doors & Windows
8	To Draw the Sketches of different types of Staircases
9	To Draw the Sketches of different types Roofs
10	To Draw the Sketches of different types Scaffolding.

First Year Engineering Department

Courses offered by Artificial Intelligence Board

Course Title: **Introduction to Artificial Intelligence and Machine Learning**										
Semester		Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	ODD	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	PCC1	1	--	2	2	10	15	50	25	--
Course Code	**BTAI1TT101** **BTAI1PI101**									
Teaching Mode	Offline	3 Hrs.			Total	75			--	
Duration of ESE	2 Hrs.					100				

Course Objectives	1. Understand the fundamental concepts and principles of AI and ML, including their history, applications, and impact on society.
	2.Gain knowledge of different types of intelligent agents and their architectures, and develop an understanding of how agents can solve problems and make decisions
	3.Gain practical experience in implementing and applying supervised learning algorithms, such as linear regression, logistic regression
Course Outcomes	Up on successful completion of this course, student will be able to:
	CO1: Understand the basic concepts, principles, and goals of AI and ML.
	CO2: Identify and differentiate various AI techniques and their applications in real-world scenarios.
	CO3: Analyze problem spaces and formulate problems as computational tasks suitable for AI techniques.
	CO4: Develop programming skills to implement AI and ML algorithms using programming languages and frameworks commonly used in the field.
	CO5: Apply supervised learning algorithms, such as linear regression, logistic regression to solve classification and regression problems.

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	PSO3
CO1	**3**	**2**	**3**	**1**	**2**	**2**	**1**	**1**	**2**	**1**	**3**	**2**	**1**	**-**

Course Contents:

Unit	Contents	Hours
I	**Introduction to AI**: Definition and goals of AI, History and evolution of AI, Applications of AI in various domains, Ethical considerations in AI, Intelligent Agents - Agent-based systems, Agent architectures, Problem-solving agents	3
II	**Problem Solving:** Solving Problems by Searching: Problem Solving Agents, Searching for Solutions, Uninformed Search Strategies, Informed Search Strategies, Heuristic Functions, Local Search Algorithms and Optimization Problems, Local Search in Continuous Space,	4
III	**Introduction to Machine Learning:** Definition Machine Learning, Difference between machine learning and traditional programming, Evolution of machine Learning, Types: Supervised ML, Unsupervised, Reinforcement Learning, Types of Variable: Independent Variable, Dependent Variable, Understanding Data Types: Continuous and Categorical Variables, Data Pre-processing and Feature Engineering, Real Time Application of Machine Learning. **Supervised Learning Algorithms:** Linear Regression, Types: Simple Regression, Multiple Regression Assumption of Linear Regression, Overfitting and Underfitting, Bias and Variance Trade-off Evaluation Metrics of Linear Regression: SSE, SST, MSE, RMSE, R-Squred. Adj R-sq. **Unsupervised Learning Algorithms:** PCA & clustering.	7
IV	**Ethics in AI:** Introduction to ethical action, ethical reasoning approaches by AI, Ethical behavior levels. The Ethical Status of AI Systems, Ethical Benefits of AI, Legislation and Regulation.	2

First Year Engineering Department

Sr. No.	List of Experiments
1	Installation of Python and IDEs.
2	Loading different types of dataset, creating data frame and performing basic Operations on data frame.
3	Introduction to Statistics for Exploratory Data Analysis – Description of data, Correlation, Covariance, Measures of Central Tendency etc.
4	Perform Data Cleaning and Feature scaling on given dataset.
5	Data Preparation using Scikit Learn - Splitting of dataset
6	Implement simple and multiple linear regression algorithm
7	Implement logistic regression
8	Implement Clustering
9	Data Visualization using matplotlib and seaborn
Open Ended Experiments / New Experiments	
1	Based on multiple features/variables perform Linear Regression. For example, basedon a number of additional features like number of bedrooms, servant room, number of balconies, number of houses of years a house has been built – predict the price of a house.

First Year Engineering Department

Elective-I: Vocational and Skill Enhancement

Course Title: **Vocational and Skill Enhancement I (Data Visualization)**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC1	1	--	2 Hrs.	2	10	15	--	25	--
Course Code	VSBTAI1TI102 VSBTAI1PI102									
Teaching Mode	Offline	3 Hrs			Total	25			25	
Duration of ESE	--					50				

Course Objectives	1. To understand the role and necessity of Data Visualization.
	2. To analyze and comprehend the various data in different charts.
	3. To learn the applicability of the techniques in data visualization.
	4. To use Advanced Data Cleaning and Transformation Tool in multidisciplinary environments.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Apply appropriate Python Libraries to visualize a data.
	CO2: Create different charts for categorical data.
	CO3: Apply the knowledge to Selected appropriate Dataset and visualize it in different plot.
	CO4: Visualize the selected appropriate data by using Advanced Excel methods and Python Libraries.
	CO5: Use Advanced Data Cleaning and Transformation Tool in multidisciplinary environments.

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	Introduction of basic Python Library: What is data analysis and data transformation? How to Visualize Data with Python, Matplotlib & Seaborn, Matplotlib Pyplot , Matplotlib Plotting, Matplotlib Markers, Matplotlib Line, Line Styles, Line Color, Line Width, Matplotlib Labels and Title, Customize the X-axis in MatPlotLib. What is Seaborn, Installation of Seaborn Library ,Different categories of plot in Seaborn , Some basic plots using seaborn, Data Visualization with Seaborn Line Plot	4
II	Data Visualization Scatter Plots with a Trend Line, compare categorical data or display frequency distributions with data labels ,Histograms with Density Plots with Seaborn histplot , Add Outline or Edge Color to Histogram in Seaborn, Boxplot using Seaborn in Python, Grouping variables in Seaborn boxplot with different attributes., Coloring Boxplots with Palettes, Mean on Boxplot, Histograms **in MatPlotLib, Multiple Histograms in MatPlotLib,** Matplotlib Pie Charts, Labels.	4
III	Data Visualization: Using Advanced Excel Data Visualization in Excel, Power Pivot Table, Excel Power Query with customizable calculations and visualizations, data labels, Excel Power View and Data Model, Create Charts and Visualizations (line, data bar, column, tree map) charts by using Advanced Excel methods, Microsoft Power Map for Excel is a three-dimensional (3-D) data visualization tool, Clean Data in Excel, Excel's data tools like Text to Columns for importing data. Removing duplicates**.**	4

First Year Engineering Department

Sr. No.	Experiment List	Mapping With CO
1	Implementation of basic Python Library Matplotlib or Seaborn to create line plots, which are useful for visualizing trends and patterns in data over time or across different categories.	CO1
2	Create bar charts using Matplotlib or Seaborn to compare categorical data or display frequency distributions with data labels.	CO2
3	Use a data visualization library such as Matplotlib or Seaborn to create a histogram and plot the histogram, ensuring appropriate labelling of the x-axis, y-axis, and title to data.	CO1, CO2
4	Apply the Plotly library to create a boxplot visualization for the sales data and Compare the central tendency (median) and variability (interquartile range) among the product categories to understand differences in sales performance.	CO1, CO3
5	Use the Plotly library to create a pie chart visualization.	CO1, CO2
6	Apply advanced Excel Method to visualize a large dataset into Power Pivot Table and Power Query with customizable calculations and visualizations.	CO1, CO4
7	Create dynamic and interactive charts using features like data labels, trendlines, secondary axes, and combination of (e.g .line, data bar, column, tree map) charts by using Advanced Excel methods.	CO2, CO4
8	Apply the Advanced Excel add-ins like Power View, Power Query, and Power Map to enhance data visualization capabilities and create interactive reports	CO3,CO4
9	Use Excel's data cleaning tools like Text to Columns, Flash Fill, or Power Query to prepare data for visualization by transforming and standardizing it.(Advanced Data Cleaning and Transformation Tool)	CO4,CO5
10	Open Ended Practical – Implement t-distributed stochastic neighbor embedding (t-SNE) in Python with scikit-learn. Analyze the visualizations and derive meaningful insights. Identify key trends, patterns, or anomalies in customer behaviour, product performance, or sales trends using Python Library or Advanced Excel Methods.	CO4,CO5

Course Title: **Vocational and Skill Enhancement II**
(Elective –II) (Artificial Intelligence with Python)

Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	EVEN	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC2	1	--	2 Hrs.	2	10	15	--	25	
Course Code	VSBTAI1TI205 VSBTAI1PI205									
Teaching Mode	Offline	3 Hrs			Total	25			25	
Duration of ESE	--					50				

Course Objectives	1. To Utilize programming tools like Python, NumPy Pandas & Matplotlib.
	2.Understand applying Calculus and linear algebra to applications
	3. Perform key techniques of neural networks, including gradient descent and Backpropagation.
	4.Gain practical experience in implementing and applying AI with Python
Course Outcomes	Up on successful completion of this course, student will be able to:
	CO1: Understand the basic concepts, principles, and goals of AI with Python
	CO2: Identify various Linear Algebra Essentials required for AI applications in real-world scenarios.
	CO3: Analyze various Calculus Essentials suitable for AI techniques and applications.
	CO4: Develop programming skills to implement AI applications in Real-world scenarios.

Course Contents:

Unit	Contents	Hours
I	**Introduction to AI with Python:** Anaconda to manage packages and environments for use with Python. Jupyter Notebooks to create documents combining code, text, images, and more. Basics of Numpy, Pandas, and Matplotlib. Basic concepts of various fields of artificial intelligence like Artificial Neural Networks, Natural Language Processing, Machine Learning, Deep Learning, and its implementation in Python.	**3**
II	**Linear Algebra Essentials:** Basics and need of the Linear Algebra as mathematical tool. Vectors, Matrix and linear equations, Eigenvalues and Eigenvector, Probability Distribution operations using python.	**3**
III	**Calculus Essentials :** Introduction: Need of calculus a powerful concept in mathematics. Derivates Through Geometry: as an important indicator in the world of machine learning. Chain Rule & Dot Product: to find the derivative of a composition of two or more functions, as a very important tool in training a neural network. Integration: the inverse of a derivative: the integral.	**3**
IV	**Introduction To Neural Networks:** Understanding architecture of neural networks. Implement gradient descent and back propagation in Python. **Calculus in Neural Networks:** Relation of neural networks to calculus through an explicit example.	**3**

Text Books	1.	Python for Data Analysis: Data Wrangling with Pandas, NumPy, and IPython.
	2.	Stuart Russell and Peter Norvig. Artificial Intelligence: A Modern Approach,3rd Edition, Prentice Hall, 2009
	3	Deepak Khemani. A First Course in Artificial Intelligence, McGraw HillEducation (India), 2013.
Ebook	1.	Calculus for Machine Learning, Understanding the Language of Mathematics .Author Stefania Cristina, Mehreen Saeed.
	2.	Linear Algebra Coding with Python: Python's application for linear algebra .Author Hyun-Seok Son

Sr. No.	List of Experiments
1	Installing Jupyter Lab and use Numpy, Pandas & Matplotlib to choose appropriate plots for one and two variables based on the types of data you have for any AI application.
2	Implement any linear equations concept of linear Algebra using python.
3	Implement Eigenvalues and Eigenvectors in Python
4	Implement Probability Distribution in Python.
5	Implement dot product of two vectors in Python.
6	Implement gradient descent in Python.
7	Implement back propagation in Python illustrating applications of differentiations in neural networks.
8	Using Open AI to create your own environments for any problem

Course Code	**BTCE1TT201 BTCE1PI201**									
Teaching Mode	Offline	3 Hr			Total	100				
Duration of ESE	2 Hr 30 Mins									

Course Objectives	1. Understand the basic computer hardware and system requirements.
	2. Make them to install Operating system and operate basic software utilities
	3. Realize the importance of basic networking technologies.
Course Outcomes	After successful completion of the course, students will be able to:
	CO1: Identify different hardware peripherals, components in a CPU and its functions.
	CO2: Apply their knowledge for assembling and disassembling of computer
	CO3: Understand the different computer networking devices and commands.
	CO4: Apply their knowledge to install operating system and application software.
	CO5: Analyze the internet-based services, cyber security and cyber laws.

Course Contents:

Unit	Contents	Hours
I	**UNIT-1: Introduction to Computer Hardware and Software:** Introduction to hardware peripherals like RAM, ROM, keyboard, Mouse, processors, etc. Generation of processors. Introduction to software. Types of software (MS office, VLC media player, Win rar), etc Working of SMPS. Study of various ports. Steps and precautions to assemble computer. Study of different types of Motherboards, Motherboard Configuration, Identifying Internal and External connectors, Types of data cables, Types of Processor	3
II	**UNIT-2: Assembly of Computer, Diagnostic and Troubleshooting of PC**: Steps and precautions to assemble PC,POST (Power on Self Test), identifying problems by Beep codes errors, checking power supply using Multi-meter, Replacement of components etc. CMOS, Study of BIOS Set-up- Advance set-up, Boot configuration, Boot Menu, Test Sequence, Error Messages, Troubleshooting Procedures and Preventative Maintenance, Troubleshooting Tools and Diagnostic software, device drivers	3
III	**UNIT-3: Computer Network Tools** Introduction to computer network. Study of various networking devices .Study of various topologies. Study of various computer networks and network configuration commands.	3
IV	**UNIT-4: Operating System and Software Installations**: Introduction to operating system. Types of operating system (Windows and Linux).Window:- Evolution of operating system.Linux:- Evolution of operating system. Introduction to software. Types of software (open office, web browser, etc.)Case study of Installations step for operating system and application software. Formatting of Hard disk, Partitioning of Hard disk in different logical drives, Disk structure: Cylinders, heads, platters, tracks and sectors, Disk defragmentation, Disk clean up, Scan disk etc.	3

First Year Engineering Department

V	**UNIT-5: Internet & Cyber Security** Introduction and evolution of internet. Structure of Internet. Different Internet Study of various internet-based services like Email, Social network etc. Introduction to Cyber Security and Cyber Laws.	3

Text Books	1.	Hardware Bible by Winn L. Rosch
	2.	Hardware and Software of Personal Computers by Sanjay K. Bose
	3	IBM PC & Clones: Hardware Trouble Shooting and Maintenance by B.Govindarajalu, Tata McGraw Hill
	4	PC Systems, Installation and Maintenance, Second Edition by R. P. Beales
EBooks	1.	https://sist.sathyabama.ac.in/sist_coursematerial/uploads/SBS1104.pdf
	2	http://uru.ac.in/uruonlinelibrary/Cloud_Computing/PC-hardware-a-beginners-guide.pdf
Reference Books	1	Fundamentals of Computers by V. Rajaraman
	2	Modern Computer Hardware Course by M Lotia, P Nair, P Lotia
	3	PC Upgrade & Repair Black Book by Ron Gilster

List of Practical

1	To identify the peripherals of a computer, components in a CPU and its functions.
2	Assembling and Disassembling of different parts of computers
3	To study of different kinds of network cable and network devices.
4	To connect and configure computer in LAN.
5	To execute of different Networking commands (like ping, ssh, ifconfig, scp, netstat, ipstat, nslookup, traceroute, telnet, host, ftp, arp, wget,route.)
6	Install MS windows operating system on the personal computer.
7	Install Linux operating system on the personal computer.
8	To detect and solve computer problem using Hardware Troubleshooting
9	To detect and solve computer problem using Software Troubleshooting

10	To explore and Analysis the Security Vulnerabilities for hacking a websites / Web Applications, E-commerce services, Web Browser, Antivirus installation, malware, configuring a firewall and cyber laws etc.
11	Open Ended: Email creation and usage, Creating digital Profile on LinkedIn.

First Year Engineering Department

Course Title: **COMPUTER PROGRAMMING**

Teaching Mode	Offline	3 Hrs.			Total	25			25	
Duration of ESE	-					50				

Course Objectives	To introduce the basics of components of programming language and also develop logical thinking
	To implement concepts of mathematics into programming.
	To help students understand how to model real-world problems into the software and develop practical programming skills
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Design algorithms and flowcharts for solving Mathematical and Engineering Problems
	CO2: Apply the suitable Control structures to solve the given problem
	CO3: Investigate the problems and Identify the use of Pointers and Functions in it.
	CO4: Assess the programming structure and recommend the type of array to be useful to find a solution for applications.
	CO5: Synthesize various problems to develop logical thinking

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	Introduction to Programming: Evolution, Programming Paradigms, Features, Algorithm, Flow charts, Data types, Operators	2
II	Control Statements: Decision Making Statements: if, if-else, nested if-else, switch, go-to. Loop Control Statements: while, do-while, for, break, continue	4
III	Arrays: Definition, Declarations, Initialization, Accessing, Types of Arrays:1D,2D	3
IV	Pointers: Definitions, Declarations, Applications Functions: Definitions, Declarations, Types, Calling, Function arguments: Call by Value, Call by Reference	3
V	Structure: Definition, Accessing Structure MembersUnion: Definition, Accessing Union Members Advance Topic: Advance programming concepts	3

Text Books	1.	Kernighan and Ritchie, C programming language Prentice Hall of India,
	2.	Balguruswamy, “Programming in ANSI C”, Tata Mcgraw Hill Publishing
	3.	Kakde and Deshpande, “C and Data Structure”, Charles River Media Publisher
	4.	YashwantKanetkar, Let's C, BPB Publishers
	1.	S. K. Srivastava, Deepali Srivastava, “C in Depth”, BPB Publications

E—Books	2.	Bharat Kinariwal, Tep Dobry,"Programming in C ",University of Hawaii at Manoa Publisher
Reference Books	1.	Herbert Schildt, C: The Complete Reference, Mcgraw Hill Publishing
	2.	Expert C Programming, Deep C Secrets by Peter van der Linden.
On-line TL Material	1.	https://spoken-tutorial.org/tutorial-search/?search_foss=C+and+Cpp

Sr. No.	**Name of Experiments**
1	Implement syntax of C with algorithm and flowchart
2	Implement Data Types and Type casting
3	Implement the Branch control statements in C
4	Implement the Loop control statements in C
5	Implement the concept of Pointers using C
6	Implement the Functions in C
7	Implement recursive functions in C
8	Implement the Linear Array Operations.
9	Implement the Matrix Array Operations Array for addition and multiplication
10	Implement Structures in C
Open Ended Experiments	
1	Student Record Management System
2	Simple CPP

Course Contents:

Unit	Content s	Hours
I	Buzzwords of Data Science, Info-graphic representation of terminologies, Difference between Analysis and Analytics, Applications	3
II	Descriptive Statistics: Population and Sample, Types of Data, Measurement Levels, Representation of categorical variables, Measures of Central Tendency (Mean, Median, Mode), Skewness, Variance, Standard Deviation, Coefficient ofVariation, Covariance, Correlation. Histogram Analysis.	3
III	Inferential Statistics: Distribution, Normal Distribution, Standard Normal Distribution, Central Limit Theorem, Standard Error, Estimators and Estimates, Confidence Interval, Students T Distribution, Margin of Error	3
IV	Linear Regression: Introduction to Regression, Simple and Multiple Linear Regression, Correlation vs. Regression, SST (Sum of Squares Total), SSR (Sum of Squares Regression), SSE (Sum of Squares Error) R-Square, Adjusted R-Squared. Multiple Linear Regression, Significance of p-value	3
V	Logistic Regression: Logistic regression, Logit vs logistic, Applications of logistic regression. Introduction to data visualization and various graphical ways of datarepresentation	3

Text Books	1.	The Art of Statistics: Learning from Data (Pelican Books), by David Spiegelhalter.
	2.	Principles of Statistics by M. G. Bulmer, Dover Publications Inc.
	3.	Statistics 101: From Data Analysis and Predictive Modeling to Measuring Distribution and Determining Probability, Your Essential Guide to Statistics By David Borman, Adams Media
E--Books	1.	An Introduction to the Science of Statistics: From Theory to Implementation, by Joseph C. Watkins https://www.math.arizona.edu/~jwatkins/statbook.pdf
	2.	Introduction to Statistics, by David M. Lane http://onlinestatbook.com/Online_Statistics_Education.pdf
Referenc E-Books	1.	Information Dashboard Design: Displaying Data for At-a-glance Monitoring by Stephen Few, Analytics Press
	2.	Beautiful Visualization, by Noah Iliinsky, Julie Steele Publisher(s): O'Reilly Media, Inc.ISBN: 9781449379865

First Year Engineering Department

Sr. No.	Name of Experiments
1	Apply pivot table of Excel to perform data analysis
2	Perform Descriptive statistics of given dataset using Data Analysis Toolbox of Excel
3	Perform the Histogram Analysis of given dataset using Data Analysis Toolbox of Excel
4	Perform Simple Linear Regression using Data Analysis Toolbox of Excel or with Python and Interpret the regression table
5	Perform Multiple Linear Regression using Data Analysis Toolbox of Excel or with Python and Interpret the regression table
6	Perform the Logistic Regression and given dataset and Interpret the regression table
7	Install Tableau, Understand User Interface, Dimensions, Measures, Pages, Filters,Marks and Show Me, Dataset Connections and Create a visualization
8	Various graphs in Tableau, Integration of Map and geo-locations, Creating Interactive Dashboard and Publishing your Dashboard to Tableau Public Site
9	Scatter Plots, Data Highlighter, Pages and Cards, Annotations Creating Story and publishing on Tableau Public
10	Given a case study: Perform Interactive Data Visualization with Tableau
Open Ended Experiments	
1	Perform Data Visualization with Microsoft Power BI
2	Perform Data Visualization with R

First Year Engineering Department

Courses of Information Technology Board

Course Title: **Problem Identification and Design Thinking**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theor y			Practical	
Term	Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	PCC1	1	--	2	2	10	15	50	25	--
Course Code	**BTIT1TT201** **BTIT1PI201**									
Teaching Mode	Offline	3Hrs			Total	75			25	
Duration of ESE	NA					100				

Course Objectives	Learn to illustrate the problem definition, significance of stakeholders and information gathering
	Conduct the brain storming to generate ideas and refining of ideas
	Select the potential ideas and design potential solution
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Identify the problem definition and stakeholders
	CO2:Analyzethegatheredinformationandidentifypotentialideas
	CO3: Design a suitable prototype and evolve it.

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
CO1	**3**	**3**	**2**	**1**	**2**	**1**	**1**	**2**	**2**	**1**	**2**
CO2	**3**	**3**	**2**	**2**	**2**	**1**	**1**	**2**	**2**	**1**	**2**
CO3	**3**	**3**	**3**	**2**	**3**	**1**	**1**	**2**	**2**	**2**	**3**

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Identify the Problem** (the reinforcement of tools used at the stages of empathy and definition) More tools for the user research, such as the profile, journey map, interview criteria, stakeholder map, and observation, are introduced. The keyword replacement is suggested to be used for the ideas and discussion.	3
II	**Define Problem and Propose Ideas** (the reinforcement of tools used at the stages of definition and ideation) The PEST and other research method are mentioned in this session to identify the trend of technology and society. Based on the analysis of the user research and technology and society trends, groups define problem, and state their POV.	3
III	**Prototype Design and Test** Considering the feasibility and profitability of demo in the process of designing prototype. The way of introducing and marketing the prototype or idea is important in the innovation process. During the testprocess, students are tested prototype to potential users or strangers in the campus. The feedbacks from test can be used to measure if the prototype meet the target or not and to iterate the prototype with the comments from users.	3
IV	**Introduction of Design Thinking** Awareness of the five stages of design thinking, Master the design thinking method and tools	3
V	**Implementation and Report Writing** Each group show their final projects and reports, Each group must summarize and review the projectsand what will do for the next time.	3

First Year Engineering Department

Sr. No.	Name of Experiments
1	Define: Identify the problem definition and define it and identify the stakeholders. Enlist the constraints associated with Problem Definition and formulate the objectives.
2	Research: Conduct primary and secondary research in identified problem definition. Identify GAP and scope for improvement.
3	Information Gathering: Gather the information in the form of qualitative, quantitative and through surveys
4	Ideate: Perform brainstorming which can leads to generation of potential ideas
5	Refinement: Refine the ideas and increase the effectiveness
6	Prototype: Design a suitable prototype for ideas generated in Ideate Phase.
7	Selection: Identify the proposed design solution for implementation or development Phase
8	Implementation: Implement the solution or deliver the solution to stakeholders
9	Evolve: Identify what worked well and wherein the scope for improvement.
10	Report Writing: Write a detailed report for all the phases of design thinking.
Open Ended Experiments	
1	Define the Industry based problem and conduct the primary and secondary researchand information gathering
2	Ideate the potentials ideas and design a prototype for industry-based problem.

Teaching Mode	Online	5 Hrs			Total	75			25	
Duration of ESE	2 Hrs					100				

Course Objectives	This Course introduces basic idea of how to solve given problem.
	Focuses of paradigms of programming language.
	Aims at learning python as programming language.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Analyze and understand the behavior of fundamental programming constructs.
	CO2: Develop & Analyze Algorithms for solving problems.
	CO3: Demonstrate the knowledge of various concepts of Python Language.
	CO4: Demonstrate knowledge of advanced concepts of Python Programming
	CO5: Develop solutions using functions & recursion

Course Contents:

Unit	Contents	Hours
I	ALGORITHMIC PROBLEM SOLV ING: Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion).	8
II	DATA, EXPRESSIONS, STATEMENTS Python interpreter and interactive mode; values and types: int, float, Boolean, string, list and set; variables, expressions, statements, Tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments;	8
III	CONTROL FLOW, FUNCTIONS Conditionals: Boolean values and operators, conditional (if), alternative (if- else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices,	8
IV	DICTIONARIES Dictionaries: Creating a Dictionary, Operations and Methods (Accessing Dictionary Elements, Modifying Dictionary Elements, Iterating Over a Dictionary) ; advanced list processing – list comprehension, Dictionary Manipulation Techniques ; Object Oriented Programming: Classes and objects- inheritance-polymorphism	8
V	FILE HANDLING & EXCEPTION HANDLING Overview of exception classes and Types: try, except, finally: File processing: reading and Writing files, Recent Trends in Python	8

First Year Engineering Department

Sr. No.	List of Experiment
1	Implementing if else in Python
2	Implementing loop in Python
3	Implementing Functions in Python
4	Implementing Set, Tuple & Dictionary in Python
5	Project Using Python Module 1: Algorithms, Expression, Variables & I/O
6	Module 2: Control Structures
7	Module 3: List, Strings, Tuples & Dictionary
8	Module 4: Functions
9	Module 5: Object Oriented Programming
10	Module 6: Expression Handling & File Handling

Text Books	1.	Python Programming using problem solving Approach, ReemaTheraja,2017, First Edition
	2.	A Byte of Python, C. H. Swaroop, Edition 2.1

First Year Engineering Department

Course Title: **Introduction to Linux**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical

Teaching Mode	Offline	3Hrs			Total	25			25	
Duration of ESE	NA					50				

Course Objectives	Understand the basics of Linux operating system
	Learn the basic commands in Linux
	Learn the security concepts in Linux
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Understand the basics of Linux operating system
	CO2: Understand the basic commands in Linux
	CO3: Illustrate the networking commands
	CO4: Illustrate the search for file (simple file matching)

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Introduction to Linux Environment:** Introduction to Linux Operating System. Linux operating system and its key features. Difference between Linux and windows. Explore different Linux distributions and choose one for your experiments. Set up a Linux virtual machine or dual-boot system on your computer.	3
II	**Linux Commands** Learn basic command-line operations such as listing files and directories, changing directories, and checking the current working directory. Practice using commands like ls, cd, pwd and man to navigate the file system and access command documentation	3
III	**File and Directory Operations:** Introduction to files in Linux. Create, rename, and delete files and directories. Move and copy files and directories. Use commands like touch, mkdir, cat, grep, cp, mv, and rm to perform these operations. File Permissions: Understand the concept of file permissions in Linux. Use commands like chmod and chown to modify file permissions and ownership.	3
IV	**Shell Scripting:** Introduction, shell responsibilities, pipes and input Redirection, output redirection, running a shell script, the shell as a programming language, shell meta characters, shell variables, command substitution, debugging shell scripts. Write simple shell scripts to automate tasks. Use variables, conditionals, loops, and functions in your scripts.	3
V	**Process Management:** Understand the concept of processes in Linux. Use commands like ps, top, kill, and pgrep to manage processes. Practice starting, stopping, and monitoring processes. Use of fork and other system call of process management in Linux	3

First Year Engineering Department

Sr. No.	Name of Experiments
1	To study the introduction to Linux operating system and Install Ubuntu or Linux operating system.
2	To explore and implement command-line operation such as listing files and directories, changing directories, and checking the current working directory. using commands like ls, cd, pwd, and man to navigate the file system.
3	To understand the concept of file permissions in Linux. Use commands like chmod and chown to modify file permissions and ownership. Write shell script with different permission settings and observe their effects.
4	Write Shell script to create, rename, delete, move, copy files and directories. Use commands like touch, mkdir, cp, mv, and rm to perform these operations.
5	Write Shell script to create and edit text files using a command-line text editor like nano or vi. Learn basic text editing commands, such as saving, exiting, and searching for text within a file. Use commands like cat, echo, and grep.
6	Write a Shell Script that accepts a file name, starting and ending line numbers as arguments and displays all lines between the given line numbers.
7	To write C Programs using the following system calls of LINUX operating system fork, exec, getpid, exit, wait, close, stat, opendir, readdir.
8	a) Write a shell script to list all of the directory files in a directory b) Write a shell script to find factorial of a given number.
9	a) Write a script to count number of lines in a file that does not contain vowels b) write a script to find the no of characters ,words and lines in a file
10	Write simple shell scripts to automate tasks such as use variables, conditionals, loops, and functions in your scripts. Execute and test your scripts.

Term	Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	C	1	-	2	2	10	15	50	25	--
Course	**BTDS1TT201** **BTDS1PI201**		-							
Teaching Mode	Offline	3 Hrs			Total	75			25	
Duration of ESE	3 Hrs					100				

Course Objectives	Apply necessary skills to leverage data for problem-solving in various engineering disciplines.
	Apply to collect, analyze, and interpret data to gain valuable insights and make data-driven Decisions
	Apply linear regression and logistic regression on the given dataset.
Course Outcomes	**CO1**: Analyze importance of Data Science and its Applications in Engineering.
	CO2: Analyze Data Collection and Preprocessing tasks.
	CO3: Analyze basics statistics concepts required for Data Science.
	CO4: Apply machine learning algorithms for prediction and classification tasks.
	CO5: Apply understandings on Real-world problems and challenges.

First Year Engineering Department

CO4	2	2	2	2	3						1	3	3

CO5	3	3	3	2	3			1	1	1	2	3	3

Course Contents:

I	**Introduction:** Introduction to Programming Language, Introduction to C Programming, Keywords & Identifiers, Constants, Variables, Input and Output Operations, Compilation and pre-processing, Data types: Different data types, Data types qualifier, modifiers, Memory representation, size and range, Operators: Operators (Arithmetic, Relational, Logical, Bitwise, Assignment & compound assignment, Increment & Decrement, Conditional), Operator types(unary, binary, ternary). Expressions, Order of expression (Precedence and associativity) Control structures: Decision Making and Branching (Simple IF Statement, IF…ELSE Statement, Nesting IF… ELSE Statement, ELSE IF Ladder), Selection control structure (Switch Statement). Loops: The WHILE Statement, The DO…WHILE Statement, The FOR Statement	**6**
II	**Array: Concept of Array & Pointers** Array Declaration, types of array(one and multiple dimension), Character Arrays and Strings, Subscript and pointer representation of array, Array of Pointers, Limitation of array, Pointers: Concept of Pointer (null pointer, wild pointer, dangling pointer, generic pointer), Pointer Expressions, Accessing the Address of a Variable, Declaring Pointer Variables, Initializations of Pointer Variable, Accessing a Variable through its Pointer, Applications of Pointers: Create a singly linked list, Insert element into an existing linked list 1 Delete element(s) from a linked list, Traverse a linked list	**8**
III	**Storage Class & Function** Storage class: Types (auto, register, static, extern), scope rules, declaration and definition. Function: Function & types (User defined function, library function) Function Definition, Declaration, Function Calls, Header file and library, Function Arguments, string handling function, Function recursion, Functions Returning Pointers, Pointers to Functions, Command line arguments, Application of pointer	**8**
IV	**Structure and Union & File Management** Defining, Declaring, Accessing, Initialization Structure, nested structure, self-referential structure, bit-field, Arrays of Structures, Structures and Functions, Unions, difference between structure and union, active data member, structure within union, Self-referential Structure, **File:** File Management in C, Defining and Opening a File, File opening modes(read, write, append), Closing a File, File operations, file and stream, Error Handling During I/O Operations, sequential and random access file	**6**
V	**Case Based Learning and Mini projects based upon above concepts.**	**6**

1	C Program Summation of a set of numbers, Sine function computation, Generation of the Fibonacci sequence, Finding the square root of a number	PO1,PO2,PO3,PO4,PO5	PSO1
2	C Program, the greatest common divisor of two integers, Generating prime numbers	PO1,PO2,PO3,PO4,PO5	PSO1
3	C Program for Arrays – single dimensional and multi-dimensional Strings as array of characters, string Library functions	PO1,PO2,PO3,PO4,PO5	PSO1
4	C Program for Solving problems using Arrays Finding the maximum number in a set, Array order reversal, Removal of duplicates from an ordered array, Selection sort, Bubble sort	PO1,PO2,PO3,PO4,PO5	PSO1
5	C Program to Find the Largest Element in an Array using Pointers	PO1,PO2,PO3,PO4,PO5	PSO1
6	C Program for Creation of singly linked list, Insert element into an existing linked list, Delete element from a linked list, Traverse a linked list	PO1,PO2,PO3,PO4,PO5	PSO1
7	C program: File handling – reading from file and writing into files using programs	PO1,PO2,PO3,PO4,PO5	PSO1
8	C Program to Merge/copy/variations contents of files into another file	PO1,PO2,PO3,PO4,PO5	PSO1
9	C Program for Game Development-TIC TACK TOE	PO1,PO2,PO3,PO4,PO5, PO9,PO12	PSO1,PSO2
10	C Program for Tower of Hanoi problem	PO1,PO2,PO3,PO4,PO5	PSO1,PSO2
Open Ended Experiments			
1	Travelling salesman problem implementation	PO1,PO2,PO3,PO4, PO12	PSO1, PSO2
2	Creation of advance Calculator	PO1,PO2,PO3,PO4, PO5,PO12	PSO1,PSO2

First Year Engineering Department

Courses of CSE-Cyber Security Board

Course Title: **Introduction to Cyber Security**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	ODD	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	PCC1	1	--	2	2	10	15	50	25	---
Course Code	**BTCY1TT101** **BTCY1PI101**									
Teaching Mode	Offline	3 Hrs			Total	75			25	
Duration of ESE	2 Hr					100				

Course Objectives	To understand various types of cyber-attacks, cyber-crimes & cryptography techniques.
	To learn threats and risks within context of the cyber security
	To have an overview of the cyber laws & concepts computer ethics
	To study the defensive techniques against these attacks
Course Outcomes	Up on successful completion of this course, student will be able to:
	CO1: Understand of Cyber Space & Cyber Crime Awareness
	CO2: Understand of Information Security & Cryptography
	CO3: Understand of Computer Ethics and Security Policies
	CO4: Understand of Browser Security & Password Manager Usage
	CO5: Understand of Windows and Smartphone Security

Mapping of Course Outcomes with Program Outcomes

Course Outcomes	Program Outcomes										
Course Outcomes	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Introduction to Cyber Space** History of Internet, Cyber Crime, Information Security Introduction to cryptography Computer Ethics and Security Policies GDPR Privacy and concerns	3
II	**Browser selection according to the requirement and email security, password & wifi security** Guidelines to choose web browsers, Securing web browser, Antivirus Email security, Two-steps Authentication, Password Manager, Wi-Fi Security	6
III	**Windows & smartphone security** Networking Basic Security for User Account Password Smartphone Security Android/iOS Security.	6

List of Experiments

Sr. No.	Name of Experiments
1	Study the use of network reconnaissance tools like WHOIS, dig, traceroute, nslookup to gather information about networks and domain registrars
2	Installation and demonstration of Wireshark Network Analyzer tool.
3	Trace the packets based on different filters using Wireshark.
4	Install and demonstrate the n-map tool.
5	Demonstrate the use of n-map tool for Port Scanning.
6	Install IDS (e.g. SNORT) and study the logs
7	Demonstrate the use of Wireshark network analyzer to sniff for router traffic.
8	Open Ended Experiment: To study Kerberos network authentication protocol.

Text book	1	Introduction to cyber security “Mr. Anand Shinde” Publication: “Notionpress”

First Year Engineering Department

Course Title: **Principle of Information Security**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	Skill Elective-II	1	-	2	1	10	15	--	25	--
Course Code	**VSBTCY1TI205 VSBTCY1PI205**									
Teaching Mode	Offline	3 hr				25			25	
Duration of ESE	NA					50				

Course Objectives	1. To understand the basics of Ethical Hacking
	2. To understands basics of data security & threats
	3. To understand different hacking techniques
Course Outcomes	Up on successful completion of this course, student will be able to:
	CO1: To explain the principles of Information Security
	CO2: To explain the scientific principles of data security and threats
	CO3: To identify different hacking techniques

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

Course Outcomes	Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO 11

First Year Engineering Department

Course Contents:

Unit	Content	hours
I	INTRODUCTION TO ETHICAL HACKING: Ethical Hacking Definition, difference between hacking and ethical hacking. Vulnerability, Attack Vector. Five stages of hacking	4
II	DATA SECURITY: Physical Security – Attacks and Protection, Steganography – Methods, Attacks and Measures, Cryptography – Methods and Types of Attacks,	3
III	System Hacking: Password cracking techniques, Key loggers, Escalating privileges, URL Hiding Files, Sniffers & SQL Injection: Active and passive sniffing	4
IV	Social Engineering: Phases of an attack, Common targets, Common sources of information. Web Servers and applications: Common attacks and flaws, Current tools.	3

List of Experiments:

Sr. No.	Name of Experiments
1	Introduction to Ethical Hacking. Understanding concepts of cyberspace, Cyber security & CIA triad in Ethical Hacking
2	Understanding & exploring different types of attacks, difference between treats & vulnerabilities
3	Why Linux? Linux terminal including basic functionalities & CLI
4	Understanding Hacking Life Cycle. Exploring Reconnaissance
5	Basic terminology - SQL injections, VPN, proxy, VPS, and keyloggers
6	Configure and demonstrate use of vulnerability assessment tool
7	Strengthening Default Security Settings of Common Browsers
8	Demonstrating & Exploring Social Engineering attacks
9	Understanding cryptology & basic cipher implementation
10	To study the various Vulnerabilities tools

Text Books	1.	Ethical Hacking and Digital Forensics by Narayan Vikrama
E--Books	1.	Hacking: The Art of Exploitation, 2nd Edition - Zenk - Security
Online TL Material	1.	https://onlinecourses.nptel.ac.in/noc22_cs13/preview
	2.	https://www.coursera.org/learn/hacking-patching

Vulnerabilities tools		NESSAS, be SECURE, Arachni etc

First Year Engineering Department

Courses of Civil Engineering Board

Course Title: **Engineering Mechanics**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	ESC2	3 Hrs.	--	2 Hrs.	4	10	15	50	25	--
Course Code	**ESBTCV3TT101** **ESBTCV1PI101** **ESBTCV3TT101ME** **ESBTCV1PI101ME**									
Teaching Mode	Offline	5 Hrs.			Total	75			25	
Duration of SE	2.5 Hrs.					100				

Course Objectives	1. To describe and explain the conditions of rest or motion of the bodies under the action of force and also to be familiar with the concept of simple lifting machine
	2. To illustrate the basic concepts of forces moments, couples in two dimensional force system & spatial force system.
	3. To practice and analyze the simple determinate structures like beam & truss and to understand the properties of plane geometric area.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO 1: Apply the fundamentals of two dimensional force systems for replacement into equivalent force system
	CO 2: Demonstrate the basic concepts of free body diagrams for static equilibrium for two dimensional force systems
	CO 3: Implement the concepts of Simple Lifting Machine and friction and to analyze the internal forces in the members of truss.
	CO 4: Employ the concepts of forces, moments, and couples in spatial force system
	CO 5: Apply the basic concepts of Centroid, Moment of inertia of lamina & Virtual Work

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO 10	PO 11

CO2	**3**	**3**	**2**						**1**	**1**	**1**
CO3	**3**	**3**	**2**						**1**	**1**	**1**
CO4	**3**	**3**	**2**						**1**	**1**	**1**
CO5	**3**	**3**	**2**						**1**	**1**	**1**

Course Contents:

Unit	Contents	Hours
I	**Fundamentals of Statics :** Definition of mechanics, Body, Rigid Body, Scalar quantities, Vector quantities, Representation of vector, Fundamental Units, Derived Units, Particle, Mass, Weight, Fundamental principles of mechanics, Newton‟s law of universal gravitation. **Equivalent Force System (2-D):** Concept of Force, Unit Newton force, System of force, Principle of transmissibility of force, Resolution and composition of coplanar force system, Resultant, Equilibrant, Law of parallelogram of force, Triangle law, Polygon law, Moment of force, Varignon‟s theorem, Couple and it‟s properties, Reduction of system of forces into a force couple system. Numericals on equivalent force involving co-planer force systems acting on body, Numericals on reduction of system of forces into a force couple system.	7
II	**Equilibrium of Two Dimensional Force System :** **<u>Force System</u> :** Concept of equilibrium, Principles of equilibrium, Equations of Equilibrium, Lami‟s theorem, Numericals on equilibrium involving co-planer force systems acting on body. **<u>Beam</u>:** Beam, Simply Supported Beam, Overhanging Beam, Beam reaction, Types of load acting over beam i.e. Concentrated load, Uniformly distribute load (UDL),	8

First Year Engineering Department

	Uniformly varying load (UVL), Types of support i.e. Simple support, Hinge support, Roller Support, Numericals on reaction of beam subjected to combination of loads	
III	**Analysis of Truss** *:* Perfect Frame, Imperfect frame, Deficient frame, Redundent frame, Assumptions made in analysis of truss, Method of joints, Method of sections, Numericals on forces in the members of a truss. **Friction:**Definition of friction, Types of friction, Angle of repose, Coulombs laws of dry friction, Analysis of rigid bodies on rough inclined surfaces.	8
IV	**Spatial Force System (Three Dimensional Force System):** Component of force in a space, Resultant spatial force system, Force multiplier, Cartesian form of representation of vector, Unit vector, Position vector, Displacement Vector, Scalar product or Dot product, Vector product or Cross product, Length of common perpendicular between two non-intersecting vectors, Shortest distance, Moment of force about point, Moment of force about axis, Moment arm of force about point, Moment arm of force about axis, Resultant moment, Couple.	8
V	**Properties of Areas:** Centroid of plane areas, Moment of Inertia of composite lamina, Radius of gyration, Second moment of area, Product of inertia, Parallel axis theorem, Perpendicular axis theorem, Polar moment of inertia, Moment of inertia & product of inertia about new axes, Principal moment of inertia and principal axis direction by analytical method only. **Virtual Work :** Virtual Displacement, Definition of virtual work, Principles of virtual work, Virtual work method applied to beams, frames & mechanisms.	9

First Year Engineering Department

Text Books	1.	Engineering Mechanics - Statics & Dynamics by Author : K. Vijaya Reddy & J Suresh Kumar, B S Publication, 2010, Third Edition
	2.	Engineering Mechanics Statics and Dynamics, Rajasekaran S and Sankarasubramanian G, Vikas Publishing House Pvt. Ltd., 2005.
	3.	Engineering Mechanics, Bhavikatti, S.S, and Rajashekarappa, K.G., New Age International (P) Limited Publishers, 1998.
E-Books	1.	Textbook of Engineering Mechanics by R.K. Bansal Laxmi Publications, 2005
	2.	Engineering Mechanics A Textbook Of Applied Mechanics by S. Ramamrutham, Dhanpat Rai Publishing Company (P) Limited, 2008
Reference Books	1.	I. H. Shames, Engineering Mechanics: Statics and dynamics, PHI, 2002,Fourth Edition
	2.	F. P. Beer and E. R. Johnston, Vector Mechanics for Engineers, Vol I – Statics,Vol II – Dynamics, Tata McGraw Hill, 2011, Ninth Edition
	3.	R. C. Hibbler, Engineering Mechanics: Principles of Statics and Dynamics,Pearson Press, 2006

Sr. No.	Name of Experiments (Any Seven)
1	Familiarity (study) of simple lifting machines
2	Determination of velocity ratio, law of machine for “Single Purchase Crab Winch
3	Determination of velocity ratio, law of machine for “Double Purchase Crab Winch”.
4	Determination of velocity ratio, law of machine for “Differential Axle and Wheel”.
5	Determination of velocity ratio, law of machine for “Simple Screw Jack”.
6	Determination of reactions at the supports of simply supported beam
7	Determination of forces in the members of jib crane.
8	Determination of forces in the members of a shear leg apparatus
9	Determination of coefficient of friction of inclined planes
10	Determination of coefficient of coil friction.
11	Determination of mass moment of inertia of fly wheel
	Open Ended Experiments
1	To investigate effect on reaction forces produced at simply supported beam due to variation of position of single load.
2	To investigate effect on reaction forces produced at simply supported beam due to variation of position of multiple loads

First Year Engineering Department

Course Title: **Skill Enhancement Course -I (Computer Aided Drawing)**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	ODD	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSC1	1 Hr	--	2 Hrs.	2	10	15	--	25	--
Course Code	**VSBTCV1TI102** **VSBTCV1PI102**									
Teaching Mode	Offline	3 Hrs.			Total	25			25	
Duration of ESE	-					50				

Course Objectives	To understand importance of Building drawing as an engineer‟s language
	To plan building as per owner‟s requirements and Building byelaws
	To develop drawings to scale with location site and block plan with AutoCAD software
Course Outcomes	**CO1**: Understand the various computer aided Drawing tools.
	CO2: Interpret the functions of building components and draw them free hand.
	CO3: Develop Single Line building drawing as per functional requirements.
	CO4: Evaluate the planning & drawing with appropriate scales using AutoCAD Software.
	CO5: Develop the Provisional drawing of a building as per bye-laws.

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

Course Outcomes	Program Outcomes

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Introduction of Drawing tools –** Introduction to various methods of Drawing, Its‟s significance, various drawing tools & software‟s. Introduction to 2D & 3D Drawings, Various software commands & their applications.	**5**
II	Design single line plan on Graph paper (line plans) based on various requirements for residential, public, education and industrial buildings.	**8**
III	**Auto CAD (Computer Aided Drafting)** a) Specifying Distance and coordinates. Polar coordinates, relative Cartesian coordinates. Interpreting curser modes and understanding prompt, choosing commands options , selecting objects, editing and grips. Setting up work area, measurement systems, scales factor mode as drafting tools. Symbols, blocks layers. Templates copying object, editing lines, changing length of object. Geometric construction of line and point parallel line, perpendicular lines, breaking lines, dividing lines, fillets, chambers, circles, tangent, arcs, curves through points, breaking polygons, solid shape ellipse.	**8**
IV	**Signs & Symbol :-** Hatch patterns boundary, adding text, Text formatting styles, size of text and scale of drawing, dimensions style, unit heights, locations, arrow style	**5**
V	**Method of Drawing:** Importance of Building drawing as Engineers language in construction & costing, Selection of scales for various drawings. Thickness of line Dimensioning, first angle and third angle method of projection, Abbreviations and conventional representations as per NBC, Free hand dimensioned sketches,stones of various building elements.	**6**

List of Experiments

Sr. No.	Name of Experiments / Mini Projects/ Case Studies
1	One compulsory field visit and exercise given by teacher, free hand sketching of components and building plans and report submission.
2	Minimum 15 free hand self-explanatory dimensioned sketches of various building elements in sketchbook
3	Minimum 15 self-explanatory dimensioned sketches of various building elements on Auto-CAD
4	Drawing of single line plan of residential single storied building in sketchbook & on Auto-CAD

5	Drawing of single line plan of various types of Public building single storied building in sketchbook & on Auto-CAD
6	Single Line plans of multi-storied (2-storied) residential buildings in sketchbook
7	Single Line plans of multi-storied (2-storied) various types of buildings e.g. public / educational / industrial / hospital / community on graph papers (Four assignments) in sketchbook.

Course Title: Introduction to Cement and **Concrete**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	EVEN	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	ESC3	3 Hrs.	--	2 Hrs.	4	10	15	50	25	--
Course Code	23BTCEL105 23BTCEP105									
Teaching Mode	Offline	5 Hrs.			Total	75			25	
Duration of ESE	2 Hrs.					100				

Course Objectives	To understand the properties of concrete ingredients.
	To study the compressive, flexural, split strengths etc and other non-destructive tests.
	To learn mix design of concrete and its application in construction work.
Course Outcomes	**CO1:** Understand Properties of cement , aggregates and water use in concrete
	CO2: Evaluate the Mechanical properties of hardened concrete with destructive and non-destructive testing instrument.
	CO3: Analyze various additives & admixtures of concrete to get acquainted to concrete handling equipment and different Special concrete types
	CO4: Judge the durability requirements of concrete.
	CO5: Design concrete mixes as per IS codes

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

CO5	3	3	2	2	-	2	2	1	1	1	1

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Cement**: Main constituents of cements, hydration of cement, water requirement. Physical properties. Types & test on Cement, field & laboratory tests. **Aggregates**: Classification and nomenclature, coarse and fine aggregate, normal weight (light and heavy weight aggregates). Aggregate characteristics and their significance in strength, workability, placement and compaction of concrete. Sampling, Particle shape and texture, Bond of aggregate, size & grading of aggregate strength of aggregate. Mechanical properties and laboratory tests– Specific gravity, bulk density, porosity, absorption of aggregate, moisture content of aggregate, bulking of sand abrasion test, impact value.	7
II	**Water**:-Water quality for mixing and curing, acceptable water, pH value, seawater chlorides content. Provisions in IS: 456-2000 **Fresh Concrete**: Batching, mechanical mixers, automatic batching and mixing plants. Efficiency of mixing, workability measurement- slump cone test, compacting factor test, flow table, Vee-Bee consisto meter, factor affecting workability, setting time, significance of W/C ratio, segregation, bleeding, voids and permeability. Placing of concrete, compaction, vibrators, methods of curing and temperature effects on curing.	10
III	**Strength of concrete**- Factors affecting compressive, tensile and flexural strengths, relation between compressive, flexural and tensile strength. **Destructive Testing of hardened concrete**: Compression strength test on cubes/ cylinder and their relation. Flexural strength of concrete, determination of tensile strength, indirect tension test. **Non Destructive Test (NDT)** – it‟s Significance, rebound hammer test, ultra sonic pulse velocity test, pullout test as per IS code provision.	8
IV	**Additives and admixtures**- Types of admixtures, byproducts – pozzolana, fly ash, silica fume, rice husk ash, metakaoline, G.G. blast furnace slag. Air entraining, water reducing, accelerators, retarders, plasticizers and super plasticizers. Fibers & it‟s types **Special concretes** – Lightweight concrete, fiber reinforced concrete, high density concrete, self-compacting concrete and applications.	8
V	**Mix Design**- Standard deviation, factors affecting mix properties, degree of quality control, design of mix by IS code method. **Durability of concrete**- Significance, water as an agent of deterioration, permeability of concrete, air sulphate attack and control, sea water attack, acid attack, efflorescence, resistance of corrosion, abrasion and cavitation‟s, process of rusting of steel. Study of different types supplementious material	7

Sr. No.	Name of Experiments / Mini Projects/ Case Studies
1	To determine Fineness of cement and Standard Consistency of Cement by Vicat"s Apparatus
2	To determine initial and Final Setting time of given cement by Vicat"s Apparatus and Soundness cement
3	To determine compressive strength of cement mortar cube.
4	To determine Moisture content, silt content, density and Specific gravity of fine aggregate by pycnometer method
5	To determine Fineness Modulus (FM) by sieve analysis of Fine Aggregate
6	To determine Moisture content, water absorption, density and Specific gravity of coarse aggregate coarse aggregate.
7	To determine Fineness Modulus (FM) by sieve analysis of coarse Aggregate
8	To determine the Workability of Concrete by Slump Test, Compaction Factor and Vee Bee test. Effect of admixture and retarders on setting time of concrete.
9	To determine the Workability of Flowable Concrete & Effect of admixture and retarders on setting time concrete.
10	To determine compressive strength by rebound hammer test and ultrasonic pulse velocity test.
11	To determine the Flexural Strength of Concrete
12	Concrete mix design by IS code method
Open Ended Experiments / New Experiments	
1	Mix Design of rapid hardening cement concrete and low heat cement concrete
2	Mix design of concrete for offshore structures
3	NDT evaluation of rigid pavement by core cutter method

First Year Engineering Department

Course Title: **Water Resources Engineering**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	ODD	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	PCC1	2 Hrs.	-	-	2	10	15	50	-	-
Course Code	**BTCV2TE206**									
Teaching Mode	Offline	2 Hrs.			Total	75			-	
Duration of ESE	2.5 Hrs.					75				

Course Objectives	To understand the hydrological cycle and its processes.
	To understand the infiltration characteristics of runoff.
	To characterize developing hydrograph.
Course Outcomes	**CO1**: Classify hydro-meteorological parameters & estimate abstractions from precipitation.
	CO2: Apply the mechanism of Evaporation, Transpiration and Evapotranspiration in real life situation
	CO3: Analyze rainfall-runoff models and development of hydrographs
	CO4: Examine statistical model and solve hydrologic flood routing models
	CO5: Investigate ground water hydrology and design of rainwater harvesting system.

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Introduction**: Hydrological Equations and brief description of its components. Importance of temperature, wind and humidity in hydrology. Earth and its atmosphere and importance. Definition, classifications, selection of site, density and adequacy of rain-gauge station.	6
II	**Infiltration:** Definition, mechanism, factors affecting. **Evaporation:** Definition, mechanism, factors affecting. **Transpiration:** Definition, mechanism, factors affecting.	10
III	**Run off:** Source components of run off, classification of streams, factors affecting. Estimation of discharge and Measurement methods. **Hydrographs:** Introduction: unit hydrographs. Base flow and base flow separation, S-Curve theories. Numerical on Infiltration, Evaporation, Transpiration, Runoff, Hydrographs.	8
IV	**Statistical methods:** Statistics in hydrological analysis. Probability and probability distribution. Analysis of time series, frequency analysis. Statistical analysis of the precipitation. **Floods:** Causes and effects, factors affecting, flood routing and flood forecasting & numerical.	8
V	**Geohydrology:** Introduction, occurrence and distribution, ground water exploration techniques, introduction to hydraulics of well, Numerical. Ground water quality, geomorphic and geologic control, Ground water province of India. **Ground water recharge:** Introduction, recharging methods, spreading methods. Recharge through rain water harvesting. Interlinking of rivers and catchment.	8

EBooks	1.	Handbook of Applied Hydrology, Second Edition, By Vijay P. Singh, Ph.D., D.Sc., D. Eng. (Hon.), Ph.D. (Hon.), D. Sc. (Hon.), P.E., P.H., Hon. D. WRE, Academician (GFA)

Duration of ESE	-					50				

Course Objectives	To understand importance of Building drawing as an engineers language
	To plan building as per owner's requirements and Building byelaws
	To develop drawings to scale with location site and block plan with AutoCAD software
Course Outcomes	**CO1**: Understand the principle of planning and provisions in Bylaws
	CO2: Interpret the functions of building components and draw them free hand
	CO3: Relate building drawing as per functional requirements
	CO4: Evaluate the planning & drawing with appropriate scales using AutoCAD software.
	CO5: Develop the submission drawing of a building as per bye-laws

First Year Engineering Department

Course Contents:

Unit	Contents	Hour s
I	**Designing of Building-** Importance of drawing in Civil Engineering, Site requirements, zoning concept, Detailed Project Report and Building byelaws necessary documents. Climate and design consideration, orient ation, recommendations of CBRI, General principles of planning with emphasis on functional planning. Graph paper design (line plans) based on various requirements for residential, public, education and industrial buildings.	**8**
II	**Auto CAD (Computer Aided Drafting)** a) Specifying Distance and coordinates. Polar coordinates, relative Cartesian coordinates. Interpreting curser modes and understanding prompt, choosing commands options, selecting objects, editing and grips. Setting up work area, measurement systems, scales factor mode as drafting tools. Symbols, blocks layers. Templates copying object, editing lines, changing length of object. Geometric construction of line and point parallel line, perpendicular lines, breaking lines, dividing lines, fillets, chambers, circles, tangent, arcs, curves through points, breaking polygons, solid shape ellipse.	**5**
III	Hatch patterns boundary, adding text, Text formatting styles, size of text and scale of drawing, dimensions style, unit heights, locations, arrow style Polyline, editing, creating splice curve, dividing in segments, filling in solid area, Printing and plotting drawing, output device paper size, orientation, control on scale and location.	**5**
IV	**Method of Drawing:** Importance of Building drawing as Engineers language in construction & costing, Selection of scales for various drawings. Thickness of line Dimensioning, first angle and third angle method of projection, Abbreviations and conventional representations as per NBC, Free hand dimensioned sketches, stones of various building elements. Developing working drawings to scale as per NBC from the givens sketch design and general specifications for terraced and pitched roofs in Auto-CAD,Developing submission drawings to scale with location site and block plan complete in Auto-CAD.	**8**
V	**Perspective Drawing:** Two point and Three Point perspective of Residential building including small elements of building such as plinth offset, chajjah projections etc.	**6**

First Year Engineering Department

Courses offered by Mechanical Engineering Board

Course Title: **Engineering Graphics**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Category	ESC1/ESC2	2	--	4	4	10	15	50	25	--
Course Code	**ESBTME2TT101** **ESBTME2PI101** **ESBTME2TT101CV** **ESBTME2PI101CV**									
Teaching Mode	Offline / AutoCAD	6 Hrs.			Total	75			25	
Duration of ESE	2 Hrs.					100				

Course Objectives	To familiarize with basic engineering graphics principles and standards of drafting.
	To equip with various techniques to create technical drawings.
	To get acquainted in sketching, manual drafting and computerized drafting appropriately.
Course Outcomes	Upon successful completion of this course, student shall be able to:
	CO1: Understand concepts of dimensioning, drawing conventions and theories of projection related to engineering graphics.
	CO2: Interpret the projection of planes.
	CO3: Predict solid geometry in different angles.
	CO4: Imagine section of solids in different angles.
	CO5: Create the geometric information of engineering objects into engineering drawing using drafting tools.

First Year Engineering Department

Sr. No.	Name of Experiments/Mini Projects/Case studies	Mode of conduction
1	Types of Lines, Dimensioning & Projection of Line	Manually (on half imperial drawing sheet)
2	Projection of Plane	Manually(on half imperial drawing sheet)
3	Projection of Solids	Manually(on half imperial drawing sheet)
4	Projection of Section of Solids	Manually(on half imperial drawing sheet)
5	Orthographic projection	Manually(on half imperial drawing sheet)
6	Isometric Views	To be drawn with AutoCAD

First Year Engineering Department

Course Title: **2 Wheelers Servicing & Maintenance (Skill Enhancement Elective-I)**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC1	1	-	2	2	10	15	-	25	-
Course Code	**VSBTME1TI102** **VSBTME1PI102**									
Teaching Mode	Offline	3 Hrs			Total	25			25	
Duration of ESE	--					50				

Course Objectives	Understand the major components of 2 Wheeler, current trends, and technology overview.
	Provide students the skills to detect various faults in 2 wheeler, analyze them and perform trouble shooting
	Upon the successful completion of course, the student shall be able to:
Course Outcomes	**CO1:** Make use of proper tools for the routine maintenance.
	CO2: Identify various types of carburetor
	CO3: Demonstrate charging of battery
	CO4: Compare manual and automatic transmission system
	CO5: Solve various problem arising in 2 Wheeler.

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

Course Outcomes	Program Outcomes and Program Specific Outcomes

Course Contents:

First Year Engineering Department

Sr. No.	Content
1.	**Introduction of Safety Equipment and tools** Various types of safety equipment, its usage and importance, General tools and their uses, special purpose tools and its proper usage. Measuring tools and equipments.
2.	**Spark Plug** Types of spark plug, Construction and Spark plug, Condition of spark plug. Cleaning and testing of spark plug on machine. Part number significance.
3.	**Types of Batteries** Battery types- conventional, VRLA battery, battery charger – load testing, use of multi meter to check battery voltage, battery removal and charging procedure.
4.	**Carburetors** Various types of Carburetors, Requirement of Carburetors, Function of carburetors, principles of carburetors, system of carburetors. A/F ratio, cleaning of carburetors.
5.	**Air filters, Lubrication systems** Types of air filter, cleaning of air filter, lubrication system in engines, engine dismantling, engine assembly, inspection of various parts.
6.	**Automatic transmission** CVT Transmission Operation, Functions of CVT components, dismantling and assembly of CVT. Advantages and disadvantages of CVT.
7.	**Fuel Injectors.** Types of fuel injectors, requirement of fuel injectors
8.	**Electrical Circuits.** Basics of electricity, arious types of electric circuits such as starting circuits, lighting circuits, signaling circuits, ignition circuit and charging circuits

Text Books	1.	R.K. Rajput, A Textbook of Automobile Engineering, Lakshmi Publication, 2008
Referenc eBooks	1.	Kirpal Singh Automotive Engineers, vol.1 & vol.2, Standard publication.
	2.	Automotive Mechanics: Joseph Heitner Motor Vehicle Technology W.H. Crouse.
Online TL Material	1.	Fundamentals of Automotive Systems,Prof. C.S.Shankar Ram, IIT Madras https://archive.nptel.ac.in/courses/107/106/107106088/
	2.	The Automobile Fundamentals Certificate Course, DIYguru

First Year Engineering Department

List of Experiments

Sr. No.	Name of Experiments
1	Demonstration of General and special tools.
2	Spark plug cleaning and testing
3	Testing and charging of Batteries
4	Dismantling and assembly of Carburetors
5	Cleaning of air filters, Engine disassembly.
6	Dismantling and assembly of CVT
7	Fuel injector testing and cleaning
8	Demonstration on various electric circuits

First Year Engineering Department

Course Title: **Digital Fabrication (Skill Enhancement Elective-I)**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC 1	1	-	2	2	10	15	-	25	-
Course Code	**VSBTME1TI103** **VSBTME1PI103**									
Teaching Mode	Offline	3 Hrs			Total	25			25	
Duration of ESE	-					50				

Course Objectives	1. To construct 2D model using CAD
	2. To construct 3D model using CAD
	3. To create 3 model and 3 Printing
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Understand the principles of rapid prototyping and its applications in product development, including iterative design, testing, and refinement.
	CO2: Understand the fundamental principles of digital fabrication, including additive manufacturing, subtractive manufacturing, and computer numerical control (CNC) machining.
	CO3: Demonstrate proficiency in using digital design tools, such as computer-aided design (CAD) software, to create 3D models for fabrication.
	CO4: Utilize 3D printing technologies to transform digital designs into physical objects, considering factors such as resolution, material properties, and post-processing requirements.
	CO5: Analyze and troubleshoot common issues and errors that may arise duringthe digital fabrication process and apply appropriate solutions.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

CO4	1	2	3	3	3	2			1	3	1
CO5	1	3	2	3	3	1			2	1	3

Course Contents:

Week	Contents	Hours
I	**Introduction to Digital Fabrication** • Overview of digital fabrication and its applications • Historical background and evolution of digital fabrication • Introduction to CAD software and 3D modeling principles • Understanding the digital fabrication workflow	1
II	**Digital Fabrication Processes** • Additive manufacturing techniques: CNC, FDM, SLA, SLS, etc. • Comparison of different 3D printing and CNC • Strengths and limitations of each process	1
III	**3D Modeling Basics** • Introduction to CAD (Computer-Aided Design) software • Basic modeling techniques • Creating and editing 3D models	1
IV	**Advanced 3D Modeling** • Intermediate modeling techniques • Parametric design and constraints Designing for 3D printing: considerations and best practices	1
V	**Preparing Models for Printing** • Preparing models for printing using slicing software • Optimizing designs for printing Support structures and rafts	1
VI	**3D Printer and CNC Operation and Maintenance** • Printer components and their functions • Calibration and setup Maintenance and troubleshooting common issues	1

First Year Engineering Department

VII	**Materials for 3D Printing and CNC** • Overview of different materials used in 3D printing • Properties and characteristics of various materials Selecting the right material for specific applications	1
VIII	**Post-Processing and Finishing** • Removing support structures • Sanding, polishing, and painting 3D prints Adding post-processing details and effects	1
IX	**Practical Applications of 3D Printing** • Case studies and examples of 3D printing in different industries • Customization and personalization Rapid prototyping and small-scale production	1
X	**Project Work** • Hands-on project using 3D printing technology and CNC • Designing and printing a functional object Presentation and evaluation of the project	1

First Year Engineering Department

Course Title: **Solar PV System (Skill Enhancement Elective-I)**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC1	1	-	2	2	10	15	-	25	-
Course Code	**VSBTME1TI104 VSBTME1PI104**									
Teaching Mode	Offline	3 Hrs			Total	25			25	

Course Objectives	1. To learn the features of Solar Photovoltaic (PV) system.
	2. To identify the components of Solar PV system.
	3. To design the Solar PV system for specific load.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1. Understand the fundamentals of solar radiations.
	CO2. Evaluate electric conversion efficiency of Solar cell / PV module.
	CO3. Identify the parameters effecting efficiency of Solar PV module.
	CO4. Understand the basics of batteries for PV system.
	CO5. Design Solar PV system for various applications.

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes

CO5	3	3	3	2	3	-	3	-	2	2	-	3

First Year Engineering Department

Unit	Contents	Hours
I	**Solar Radiation:** Renewable energy sources, Solar constant, Air mass, Solar radiations- beam and diffuse, Instruments to measure solar radiations.	3
II	**Solar Cell:** Electricity, Measurement of DC voltage and current, Solar cell and types, solar cell parameters - Short circuit current, Open circuit voltage, Maximum power point, Fill factor, Efficiency, Current-Voltage curve, Factors affecting electricity generated by a Solar cell.	3
III	**Solar Module / Arrays and Batteries:** Introduction - Solar PV Modules and arrays, ratings of PV Module, Cells in module, series and parallel combinations of module and estimation of total power.	3
IV	**Batteries/ Inverters /Charge controller:** Batteries for Photovoltaic(PV) Systems, components, types ,standard parameters of a battery, Battery Storage Capacity, Depth of Discharge(DoD), Battery Efficiency. Power Converters and Their Efficiency, Types of Inverters, Specifications, Charge Controllers and types.	3
V	**Solar PV System Design:** Off-grid system, Load estimation, Determining the batteries size, Determine the PV modules size, Use of modern tools for PV system design.	3

Text Books	1.	G.N.Tiwari, Handbook of Solar Energy: Theory, Analysis and Applications, Springer Science+Business Media, Singapore, First Ed. 2016
	2.	JohnA.Duffie&WilliamA.Beckman,SolarEngineeringofThermalProcesses:Photovoltaics and Wind; John Wiley & Sons, Inc., Hoboken, New Jersey, Fifth Ed. 2020
E-Books	1.	Suneel Deambi, Photovoltaic System Design: Procedures, Tools and Applications; CRC Press, Boca Raton, 2016.
Reference Books	1.	Chetan Singh Solanki, Solar Photovoltaic Technology and Systems - A Manual for Technicians, Trainers and Engineers;PHI Learning Private Limited, Delhi, First Ed., 2013
	2.	Weidong Xiao, Photovoltaic Power System: Modeling, Design, and Control; John Wileyand Sons Ltd., First Ed. 2017

6.	To study the effect of module temperature on performance of PV module.
7.	To study the series and parallel combination of PV modules.
8.	To study the effect of tilt angle and shading on the PV output
9.	To determine the connected load and their energy estimation for PV system design.
10.	Design of photovoltaic system for various applications.

First Year Engineering Department

Course Title: **Material Science and Workshop Practice**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Category	ESC3	2	-	4	4	10	15	50	25	-
Course Code	**ESBTME2TT205** **ESBTME2PI205**									

Teaching Mode	Offline	6 Hrs.	Total	75	25
Duration of ESE	2 Hrs.			100	

Course Objectives	1. To provide the students with basic knowledge of materials science
	2. To distinguish between variety of materials based on their structure and properties
	3. To demonstrate in workshop for various operations
Course Outcomes	Upon the successful completion of course, the student shall be able to
	CO 1. Demonstrate in workshop for various operations
	CO 2. Know the different classes of materials used in engineering applications.
	CO 3. Distinguish between variety of materials based on their structure and properties
	CO 4. choose the right materials for specific applications
	CO 5. Select cutting tool based on the material and desirable properties.

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Workshop and Digital fabrication:** Workshop: Introduction to cutting tools, Methods of manufacturing processes – casting, forming, metal removal processes, joining processes, surfacefinishing processes, basic workshop processes – carpentry, fitting, handforging, machine forging, welding, cold and hot working of metals. Introduction to Digital fabrication: 3D printing, CNC machines	8
II	**Introduction to Material Science:** Properties of Materials, Structure of atoms, Description of materials science tetrahedron, Force - interatomic distance curve, Structure - description of unit cell and space lattices, Coordination number, APF for cubic and hexagonal close packed structures, Miller indices, Non crystalline structures properties of crystalline and amorphous structures, Crystal imperfections Significance of structure property correlations in all classes of engineering materials.	6
III	**Crystallography and Phase diagrams** – Solid solution, Hume Rothery rule, Time temperature cooling curve, construction of equilibrium diagram, Gibbs phase rule - Single component systems – Eutectic phase diagram – lever rule -Study of properties of phase diagrams - Phase transformation - Nucleation kinetics and growth, allotropy of iron, microstructure .	6
IV	**Mechanical properties** - Stress, Strain, Elastic properties – Deformation – elasticity – hardness – Rockwell, Brinell test, tensile test, impact test, Izod andCharpy test, non-destructive testing	6

First Year Engineering Department

Course Title: **Sensors, Actuators and Measurement**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Code	**BTME1TT206** **BTME1PI206**	1	-	2	2	10	15	50	25	-
Teaching Mode	Offline	3 Hrs			Total	75			25	
Duration of ESE	2 Hrs.					100				

Course Objectives	1. To understand the basic concept of sensors, actuators, and measurement system, along with its functional element.
	2. To study the performance characteristics of measuring instruments
	3. To learn various measuring instruments and its applications.
Course Outcomes	Upon successful completion of this course, student shall be able to:
	CO 1. Relate the use of sensors, actuators, and measuring instruments in various applications and interpret the instrument characteristics.
	CO 2. Select a measuring instrument for strain and pressure measurement.
	CO 3. Illustrate the force, motion and flow measuring instrument.
	CO 4. Decide the temperature measuring instrument
	CO 5. Choose the proper measuring instruments for speed, vibration, humidity, and liquid level

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

First Year Engineering Department

Sr. No.	Name of Experiments
1	Study of various cases of size and shape
2	Idea generation
3	Concept development
4	Preparation of model
5	Study of various material
6	Study of asthetic look and color
7	Preparation of prototype
8	Innovative product development

First Year Engineering Department

Course Title: 3 D Printing (Vocational Skill Enhancement)										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC 2	1	-	2	2	10	15	-	25	-
CourseCode	**VSBTME1TI208** **VSBTME1PI208**									
Teaching Mode	Offline	3 Hrs			Total	25			25	
Duration of ESE	-					50				

Course Objectives	1. Understand the fundamentals of 3D printing
	2. Develop proficiency in 3D modeling
	3. Gain practical knowledge of 3D printer operation
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO 1. Gain a comprehensive understanding of the principles, processes, and techniques involved in 3D printing
	CO 2. Develop skills in 3D modeling software to create and design 3D printable models.
	CO 3. Have practical experience operating 3D printers.
	CO 4. Learn about different materials used in 3D printing, their properties, and their suitability for various applications.
	CO 5. Familiarized with post-processing techniques for 3D printed objects.

	2.	Metal Additive Manufacturing https://onlinecourses.nptel.ac.in/noc23_me92/preview

Sr. No.	Name of Experiments / Mini Project
1	**Basic 3D Printing Setup:** Learn how to set up and calibrate a 3D printer, including leveling the build plate and loading filament.
2	**Designing for 3D Printing:** Explore various design principles and software tools (such as CATIA, Tinkercad) to create 3D printable models. Learn about properwall thickness, support structures, and other considerations.
3	**Printing with Different Materials**: Experiment with different types of filaments, such as PLA, ABS, PETG, or TPU, to understand their characteristics and printing requirements.
4	**Optimizing Print Settings:** Master the settings in your slicing software to achieve high-quality prints. Learn about layer height, print speed, infill density, and other parameters that affect the final result.
5	**Troubleshooting Print Issues:** Identify and solve common problems that may occur during the printing process, such as warping, stringing, or layer shifting.
6	**Post-Processing Techniques:** Explore techniques to enhance and finish 3D printed objects, including sanding, painting, smoothing, or adding surface finishes.
7	**Prototyping:** Use 3D printing to quickly iterate and prototype new product designs or engineering concepts.
8	Introduction to SLA 3D printing

First Year Engineering Department

Course Title: **Maintenance of Refrigeration and Air Conditioning Systems (Skill Enhancement Elective-II)**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC2	1	-	2	2	10	15	-	25	-
Course Code	**VSBTME1TI209** **VSBTME1PI209**									
Teaching Mode	Offline	3 Hrs.			Total	25			25	
Duration of ESE	2 Hrs.					50				

Course Objectives	1. To learn fundamental principles of refrigeration and air conditioning, along with refrigerant properties.
	2. To understand the different technologies of refrigeration and air conditioning.
Course Outcomes	Upon the successful completion of course, the student shall be able to
	CO 1. Demonstrate basic & application of refrigeration & air conditioning.
	CO 2 Understand the importance of eco-friendly refrigerants, applications and environmental issues of refrigerants.
	C03 Describe the vapour compression systems and vapour absorption systems.
	CO4 Apply concepts of psychrometry and understand the different Human comfort parameters in refrigeration & amp, air conditioning.
	CO5Describe the different air conditioning systems.

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes

	3.	W. F. Stockers and J. W. Jones, Refrigeration and Air conditioning, McGraw Hill International, 2nd Edition, 1982.
Online TL Material	1.	Refrigeration And Air-Conditioning, Prof. Ravi Kumar, IIT Roorkee, Swayam https://onlinecourses.nptel.ac.in/noc23_me132

Sr. No	List of Practical: Conduct any eight practicals.
1.	Test on vapour compression test rig and its performance.
2.	Test on a desert cooler to evaluate its performance.
3.	Test on vapour absorption refrigeration test rig for its performance.
4.	Test on vortex tube refrigeration system to determine its performance.
5.	To perform trial on thermoelectric refrigeration system to determine COP.
6.	To perform trial on adiabatic demagnetization refrigeration system.
7.	Test on ice plant test rig for its performance.
8.	Test on air conditioning test rig for its performance.
9.	To perform trial on thermoacoustic refrigeration system (Open Ended).
10.	To perform trail on vapour compression test ring with magnet (Open Ended).

First Year Engineering Department

Courses of Electrical Engineering Board

Course Title: **Basic Electrical Engineering**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	L	T	P	Credits	TAE	CAE	ESE	INT	EXT
Course Category	ESC1	3	-	2	4	10	15	50	25	-

Teaching Mode	Offline	5 Hrs.			Total	75			25	
Duration of ESE	2 Hrs.					100				

Course Objectives	To prepare students to understand Different types of Circuit Elements.
	To make aware about basic principles of operations of electrical machines.
	To train students to know about energy audit, Management and Safety.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Remenber fundamentals of Electric Circuits.
	CO2: Understand the basic quantities of a magnetic circuit
	CO3: Identify different configurations of A.C. Circuits.
	CO4: Compare A.C machines and DC Machines.
	CO5: Estimate Energy Audit for Energy Management and Safety.

Course Contents:

Unit	Contents	Hours
I	**Unit-I:- Fundamentals of Electric Circuits** Ohms Law, types of sources (Current & Voltage), Ideal and Practical Sources (Independent Sources only), Source Conversion. Superposition theorem with DC source. Circuit element resistance, series & parallel combination of resistances, Kirchhoff's Laws (KVL, KCL).	7
II	**Unit – II:- Magnetic Circuits** Types of Magnetic Materials, flux, flux density, flux intensity, MMF, reluctance, permanence, permeability, analogous electric circuit, concept of leakage flux and fringing, B-H curve, phenomena of magnetic hysteresis.	7
III	**Unit III:- A. C. Circuits** Generation of single phase voltage, average and RMS value for sinusoidal waveform,phasor representation of sinusoidal electrical quantities, RLC circuit with excitation,reactance, impedance, power and energy in AC circuit, series AC circuit, concept and importance of power factor.	7
IV	**Unit V Introduction to Electrical Machines** Working principle of Single phase transformer, DC machines (DC Generator& Motor), AC Machines.	5
V	**Unit V:- Energy Audit & Safety Instruments** Need and types of energy audit. Energy management, understanding energy costs, Necessity of equipment earthing, Fuses, MCB, ELCB, Isolator (Elementary concepts only), Introduction to House Wiring.	4

First Year Engineering Department

Text Books	1.	Basic Electrical and Electronics Engineering, S K Bhattacharya, Pearson, 2nd Edition.
	2.	Basic Electrical Engineering, H. Cotton, C B S, 2005, Seventh Edition
	3.	Engineering Circuit analysis, William Hayt, Tata McGraw Hill
E--Books	1.	Fundamentals of Electrical Engineering by Don Johnson, Connexions, 2010
	2.	Fundamentals of Electrical Engineering and Electronics,Tony R. Kuphaldt.
Reference Books	1.	Introduction to Electrical Engineering, Naidu, Kamakshaia, Tata McGraw Hill, 2000, Third Edition
	2.	Electrical and Electronics Technology, Hughes, Pearson, Eleventh Edition
	3.	Laboratory courses in Electrical Engg., S G Tarnekar, P K Kharbanda, S B Bodkhe, S D Naik, S. Chand & Co., 2010, Second Edition
Online TL Material	1.	https://nptel.ac.in/courses/108/108/108108076/
	2.	https://nptel.ac.in/courses/108/108/108108076/
	3.	https://nptel.ac.in/courses/108/108/108108076/

List of Practical / Experiment

Sr. No.	Name of Experiments
1	Overview of Lab Equipment & Safety Precaution.
2	To Verify Superposition Theorem.
3	To Verify Kirchhoff‟s Voltage Law.
4	To Determine Active and Reactive power of Choke coil.
5	To Plot B-H curve of Magnetic Circuit.
6	Study of phase relationship in R-L-C parallel network by computer simulation using P-Sim Software.
7	To Determine transformation ratio of transformer.
8	Case Study on Energy Audit
Open Ended Experiments / New Experiments	
1	To compare normal capacitor with super-capacitor, Various Types of Capacitor.
2	To study resonance circuit using software
3	Circuit designing, Testing & Validation of Electrical Circuits
Details of Online Laboratory Resource Material Instruction / Operating Manuals	
1.	Virtual Lab

First Year Engineering Department

Course Title: **Skill Enhancement Elective– I (Solar Photo Voltaic and its application)**										
Semester	IV	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	ODD	T h	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC1	1	-	2	2	10	15	-	25	--
Course Code	**VSBTEL1TI102** **VSBTEL1PI102**									
Teaching Mode	Conventional	3 Hrs			Total	25			25	
Duration of ESE	NA					50				

Course Objectives	**Students will learn to**
	Understand the fundamentals of energy conversion in solar photovoltaics
	Understanding various technologies in structures of solar photovoltaic cells
	Developing the skills in basic calculations in solar PV systems design
Course Outcomes	**Students will be able to**
	CO1: Understand various aspects of Solar Photovoltaic cell
	CO2: Understand Solar Photovoltaic energy conversion and utilization
	CO3: Understand and classify equipments in radiation measurement
	CO4: Understand use of various equipments associated with safety measures
	CO5: Understand the application of Solar PV system in various electricity consumers

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

Course Outcomes	Program Outcomes and Program Specific Outcomes													
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PSO 1	PSO 2	PSO 3
CO1	3	2	3	1	3					1	1	1	1	3
CO2	3	3	3	1	3					1	1	1	1	3
CO3	3	3	3	1	3					1	1	1	1	3
CO4	3	3	3	1	3					1	1	1	1	3
CO5	3	2	3	1	3					1	1	1	1	3

Course Contents:

Unit	Contents	Hours
I	**Solar Photovoltaic and Its Applications:** Introduction to Solar PV technology, Principle of Energy conversion, Solar cell Characteristics, Series and Parallel connections of PV module – concept of Module and Array, various types Battery energy storage technologies, Inverters – standalone and grid connected, MPPT tracking systems, understanding On Grid and Off-grid PV systems, introduction to Net metering and its aspects**,** Introduction to charge controllers - its role and functions, financial incentives provided by utility on solar PV installationsand related policies, Estimation of losses & system yield calculation, Off-grid PV system design & component sizing for various types of electricity consumers, PV array design requirements as per IEC 62548, introduction System protection and safety equipments, Economics of PV Systems and payback period calculations, Operation and maintenance of PV systems, PV system installation & commissioning, application of solar PV systems for various types of electricity consumers	20

Sr. No.	List of Experiments
1	To study the overview of Solar Laboratory
2	To study 172.5 kW Solar PV system installed at Shradhha park campus
3	To study of Mono and polycrystalline structures of solar PV cell
4	To Study various battery energy storage systems associated with solar PV systems
5	To Study net metering system for Grid connected Solar PV system
6	To plot V-I characteristics for solar PV cell
7	To Study various safety instruments required during solar PV system installation
8	To study monthly electricity bills of GHRIET campus to understand monthly financial incentives offered by utility systems

First Year Engineering Department

Text Books	1.	1. Solar Photovoltaics: Fundamentals, Technologies And Applications, BookAuthor: Dr. Chetan Singh Solanki, Publisher- PHI learning
	2.	2. The Solar Electricity Handbook - 2017 Edition, by Michael Boxwell

Course Title: **Skill Enhancement Elective– I Energy Conservation & Audit**										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC1	1	-	2 Hrs.	2	10	15	-	25	--
Course Code	**VSBTEL1TI103** **VSBTEL1PI103**									
Teaching Mode	Offline	3 Hrs			Total	25			25	
Duration of ESE	NA					50				

Course Objectives	The subject aims at basic components
	To give understanding on current energy scenario
	To expose students to the function and application Energy Management
	To use appropriate experimentation techniques to evaluate energy efficiency in electrical system
Course Outcomes	**Upon successful completion of this course, student will be able to:**
	• Understand the current energy scenario and importance of energy conservation.
	• Understand the concepts of energy management.
	• Understand the methods of improving energy efficiency in different electrical systems.
	• Understand the concepts of different energy efficient devices.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes										
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11

CO5	3	3	1	2	2	3	--	3	3	2	3

Course Contents:

Unit	Contents	Hours
I	**Energy Scenario** Commercial and Non-commercial energy, primary energy resources, commercial energy production, final energy consumption, energy needs of growing economy, long termenergy scenario,. Energy Conservation Act-2001 and its features.	5 Hrs
II	**Basics of Energy and its various forms** Electricity tariff, load management and maximum demand control, power factor improvement, selection & location of capacitors, Thermal Basics-fuels, thermal energy contents of fuel, temperature & pressure, heat capacity, sensible and latent heat, evaporation, condensation, steam, moist air and humidity & heat transfer, units and conversion.	5 Hrs
III	**Energy Management & Audit** Definition, energy audit, need, types of energy audit. Energy management (audit) approach understanding energy costs, bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirements, fuel & energy substitution, energy audit instruments. Material and Energy balance: Facility as an energy system, methods for preparing process flow, material andenergy balance diagrams.	5Hrs
IV	**Energy Efficiency in Electrical Systems** Electrical system: Electricity billing, electrical load management and maximum demand control, power factor improvement and its benefit, selection and location of capacitors, performance assessment of PF capacitors, distribution and transformer losses. Electric motors: Types, losses in induction motors, motor efficiency, factors affecting motor performance, rewinding and motor replacement issues, energy saving opportunities with energy efficient motors	5 Hrs

Text Books	1.	Guide books for National Certification Examination for Energy Manager / Energy Auditors Book-1, General Aspects (available online)
	2.	Guide books for National Certification Examination for Energy Manager / Energy Auditors Book-3, Electrical Utilities (available online)
	3.	S. C. Tripathy, "Utilization of Electrical Energy and Conservation", McGraw Hill, 1991.
Reference Books	1.	. Success stories of Energy Conservation by BEE, New Delhi (www.bee-india.org)

First Year Engineering Department

Course Title: **Advanced Electrical Technology**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/ Even	Th	Tu	P r	Credits	TAE	CAE	ESE	INT	EXT
Course Category	PCC1	**2**	--	--.	2	10	15	50	--	--
Course Code	**BTEL2TE205**									
Teaching Mode	Offline	2 Hrs			Total	75				
Duration of ESE	2Hrs					75				

Course Objectives	To prepare students to understand Different types of poly phase circuit
	To make aware about basic principles of operations of transformer and machines
	To train students about the Electrical power system.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Understand different aspects of transformer.
	CO2: Describe the polyphase circuit.
	CO3: Analyze the performance of AC Motor.
	CO4: Identify different types of DC Machines.
	CO5: Highlight the overview of Electrical Power System.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes

CO4	3	3	3	2	2	1	--	--	--	1	1
CO5	3	2	1	2	2	1	--	--	--	1	1

Course Contents:

Unit	Contents	Hours
I	**Unit I : Single Phase Transformers.** Basic principle, construction, phasor diagram for transformer under no load condition, Transformer on load, EMF equation Phasor diagrams, Equivalent circuit, Losses, Efficiency, Regulation, Open-circuit & short-circuit test,Applications.	10
II	**Unit II : Polyphase Circuits** Principal of Generation of three phase voltage, Phase sequence, Star & DeltaConnected three phase system, Voltage, Current & Power relations for Balanced three phase system.	6
III	**Unit III : AC Motors** Three phase Induction motor Construction, and principle of rotating field, synchronous speed, Rotor current, torque and slip.	8
IV	**Unit IV : DC Machines** Introduction to DC Machines, construction, EMF equation, classification, self-excitation of D.C. shunt generators.	8
V	**Unit V: Introduction to Electrical Power System** Introduction to Power Generation (Thermal, Hydro, Nuclear, Wind, and Solar) with block schematic presentation only. Single line diagram for Generation, Transmission & Distribution through different voltage levels.	8

First Year Engineering Department

Sr. No.	Name of Experiments
1	Overview of Electrical Power System.
2	To find Line & phase quantities in Three Phase star Connected balanced Load.
3	To find the efficiency and regulation of a single phase transformer by OC and SC Test.
4	To Determine the speed and torque of DC Motor by using MATLAB.
5	Introduction to Power World Simulator Software for Power Flow.
6	To Observe the speed reversal of three phase Induction motor.
7	To find Line & phase quantities in Three Phase Delta Connected balanced Load.
8	To Study Staircase Wiring.
Open Ended Experiments / New Experiments	
1	To study and observe the performance of 33/11 kV distribution substation
2	To Study different Protective Devices
Details of Online Laboratory Resource Material Instruction / Operating Manuals	
1.	Virtual Lab

First Year Engineering Department

Course Title: **Vocational & Skill Enhancement Elective-II** **Foundation of Electric Vehicle and Renewable Energy**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC2	1 Hrs	-	2	2	10	15 -		25	--
Course Code	**VSBTEL1TI206** **VSBTEL1PI206**									
Teaching Mode	Conventional	3 Hrs			Total	25			25	
Duration of ESE	NA					50				

Course Objectives	1. Develop a comprehensive understanding of electric vehicles.
	2. Gain knowledge of the various subsystems that constitute an electric vehicle powertrain.
	3. Acquire a foundational understanding of renewable energy sources.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: To understand the current state and future potential of EVs in the country.
	CO2: To identify the different components of an EV.
	CO3: To ensure a comprehensive understanding of energy storage in electric vehicles.
	CO4: To understand PV cell and module technologies.
	CO5: To familiarize students with the basics of renewable generation.

Course Title: Vocational & Skill Enhancement Elective-II (Simulation of Electric Circuit)										
Semester	I	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	ODD	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	SEE1	1	0	2	2	10	15		25	--
Course Code	**VSBTEL1TI207 VSBTEL1PI207**									
Teaching Mode	Offline	3 Hrs.			Total	25			25	
Duration of ESE	NA					50				

Course Objectives	To impart practical knowledge of Electrical and Electronics Simulation and Analysis using Mathematical computing languages such as MATLAB and/or SCILAB.
	To Solve, Simulate and Analyze basic Electrical Circuits and Applications by writing Ohm"s law, KCL and KVL Mathematical Equations and Programs.
	To develop hands on working experience with reference to Solve, Simulate and Analyze Electrical & Electronics Circuits using MATLAB or SCI LAB environments.
Course Outcomes	CO1: Apply the knowledge of Basic Network in solving and verifying various Network Theorems.
	CO2: Analyze the coupling circuits.
	CO3: Analyze the resonant Frequency and Draw the Locus Diagrams of RL and RC Circuits.
	CO4: Analyze the Transient behavior and Harmonic Content of RLC Circuits.
	CO5: Calculate the Time Response and Form Factor of a signal.

Teaching Mode	Offline	5 Hrs.			Total	75			25	
Duration of ESE	2 Hrs.					100				

Course Objectives	To understand number systems, codes and their conversions.
	To demonstrate various Digital ICs and their applications.
	To design digital circuits to solve engineering problems and applications.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Solve the problems on Number system codes and their conversions.
	CO2: Identify Digital IC and implement in the circuits.
	CO3: Create, design and simulate canonical logic forms
	CO4: Demonstrate the application of combinational and sequential logic circuits.
	CO5: Demonstrate the application of state machine

Course Contents:

Unit	Contents	Hours
I	**Number Systems** Decimal, binary, octal, hexadecimal number system and conversion, binary weighted& non-weighted codes & code conversion, signed numbers, 1s , 2s & 9s complement codes, Binary arithmetic	8
II	**Boolean Algebra& Logic Gates:** Boolean laws, truth tables, associative and distributive properties, De-Morgan‟s theorems, realization of switching functions using logic gates. Logic families: TTL, ECL, CMOS, Switching equations, canonical logic forms, sum of product & product of sums,	8
III	**Combinational Logic & Combinational Circuits:** simplification of expressions using Karnaugh maps, mixed logic combinational circuits, multiple output functions, Introduction to combinational circuits, code conversions, decoder, encoder, priority encoder, multiplexers & De-multiplexer, Basic Arithmetic Circuits.	8
IV	**Sequential Logic & Circuits:** Latch, flip-flops, clocked and edge triggered flip-flops, timing specifications, asynchronous and synchronous counters counter design, Registers, types of registers. Analysis of simple synchronous sequential circuits, Introduction to Memories.	8
V	**Finite State Machine:** Introduction to Mealy and Moore circuits, State machine design, Advanced Topics based on Course.	8

Text Books	1.	Digital Electronics, R P Jain, McGraw Hill, 2017, Second Edition
	2.	Digital Logic and Computer Design, Morris Mano, PHI , 2017, Review Second Edition
	3.	Digital Logic Design (Floyd: Digital Fundamentals With VHDL 10 / E)
Reference Books	1.	Digital Electronic Principles, Malvino, PHI 2011-13, Seventh Edition
Online TL Material	1.	https://nptel.ac.in/courses/117/105/117105080/

First Year Engineering Department

List of Experiments

Sr. No.	Name of Experiments
1	To study basic gates and verify their truth tables
3	To realize Basic gates (AND,OR,NOT) From Universal Gates(NAND & NOR)
3	To Design adder, subtractor circuit using a 4-bit adder IC
4	To study about full adder & verify its truth table
5	To design and implement encoder and decoder
6	To design and implement multiplexer and demultiplexer
7	To design and construct basic flip-flops
8	To design and construct of Synchronous Counter
	Open Ended Experiments
1	To verify the truth table of one bit and two bit Comparators using logic Gates
2	To design a 4 bit Binary to Gray code Converter, bit Gray to Binary code Converter, 3 bit Binary to Excess-3 code Converter.
3	Design of real time application using K-Map
	Details of Online Laboratory Resource Material Instruction / Operating Manuals
1.	Virtual Laboratory

First Year Engineering Department

Course Title: Vocational & Skill Enhancement Elective-I **Introduction to Drones**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/ Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	VSEC	1	--	2 Hrs.	2	10	15	--	25	--
Course Code	**VSBTET1TI102** **VSBTET1PI102**									
Teaching Mode	Offline	3 Hrs			Total	25			25	
Duration of ESE	NA					50				

Course Objectives	1. Be able to describe common components of drone
	2. Be able to define concepts related to drone
	3. Be able to design the application oriented drone
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO 1. Recognize and describe the role of drone in present, past and future society
	CO 2. Comprehend basic components of drone.
	CO 3. Explain the impact of various payloads of drone.
	CO 4. Interpret the aspects of legal issues
	CO 5. Implement and design application oriented drone.

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes										
	PO 1	PO2	PO 3	PO4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11
CO1	3	3	1	2	2	3		3	3	2	3
CO2	3	3	1	2	2	3		3	3	2	3
CO3	3	3	1	2	2	3		3	3	2	3
CO4	3	3	1	2	2	3		3	3	2	3
CO5	3	3	1	2	2	3		3	3	2	3

First Year Engineering Department

Course Contents:

Unit	Contents	Hours
I	**Introduction to Drone Technology:** Types of Drones and Their Technical Characteristics, Main Existing Drone Types, Level of Autonomy, Size and Weight, Differences in Energy Source, Widely Used Drone models,	4
II	**Assembly of Drone:** Parts of a Drone, Motor, Propellers, Flight Controllers, Electronic Speed Controllers, Safe Assembly of Drone and Drone air Flight for aerial Photos. Battery management systems	4
III	**Impact of Payloads:** Types of Payloads and their application sensors, other payloads and frequency spectrum issues.	4
IV	**Legal Aspects:** Legal issues on the use of frequency spectrum and electronic equipment, surveillance and compliance. Flight zones	4
V	**Case studies:** Future Developments in Drone Technology. Advance topic	4

Text Books	1.	The future of Drone Use Opportunities and Threats from Ethical & Legal Perspectives -Prof Bart Custer‟s , Center for Law and Digital Technologies, Leiden Law School, Leiden University, The Netherlands, October 2016,T.M.C. ASSER PRESS, ISBN: 978-94-6265-131-9
	2.	Drones (The Ultimate Guide): How they work, learning to fly, how to fly, building your own drone, buying a drone, how to shoot photos -Publisher: Create Space Independent Publishing Platform; Large Print edition (May 30, 2017) Ben Rupert (Author)
E--Books	1.	Quad copters and Drones: A Beginner's Guide to Successfully Flying and Choosing the Right Drone -Create space Independent Pub (25 June 2015) Mark Smith (Author)
Reference Books	1.	Build a Drone: A Step-by-Step Guide to Designing, Constructing, and Flying Your Very Own Drone Barry Davies
	2.	Drones: An Illustrated Guide to the Unmanned Aircraft that are Filling our Skies

First Year Engineering Department

List of Experiments

Sr. No.	Name of Experiments / Mini Project
1	Experimental study of customized drone components interfacing
2	Study of mAH battery capacity with flight time calculation and battery connection
3	Study of type of motors and ESC with connection in adopter
4	Experimental study of propeller blade rotation CC & CCL & it‟s role in control
5	Installation of Pluto X controller App & it‟s setting
6	Study of throttle control in quad copter and its controlling
7	Experimental study of role of yaw control in quad copter
8	Experimental study of role of roll control in balancing
9	Experimental study of role of pitch control in quad copter balance and its control
10	Study of sensor board X breakout and sensor interfacing to quad copter
Open Ended Experiments / New Experiments	
1	Chuck to ARM
2	Open Sesame: Drone take-off due to change in ambient pressure
3	Turn the Drone upright from it's flipped position
Details of Online Laboratory Resource Material Instruction / Operating Manuals	
1.	Cygnus software
2.	Pluto X operating manuals
3.	Transmitter & Receiver console

First Year Engineering Department

Course Title: Sensor and Instrumentation										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	EVEN	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	PCC1	2	-	-	2	10	15	50	-	-
Course Code	BTET2TT205									
Teaching Mode	Offline	2 Hrs			2	75				
Duration of ESE	2 Hrs					75				

Course Objectives	1. To gain knowledge about the measuring instruments, sensors & actuator.
	2.To able to calibrate and testing of different Sensors
	3.To able to understand different sensors & actuators
Course Outcomes	Up on successful completion of this course, student will be able to:
	CO1: Understand basic analysis of instrumentation system
	CO2: Understand working of different sensors
	CO3: Design sensor based real time applications
	CO4: Analyze and use the functions of various instrumentation systems to design different applications.
	CO5: Interpret fundamental and some special knowledge in process automation in industries.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes and Program Specific Outcomes:

Course Outcomes	Program Outcomes and Program Specific Outcomes													
	P O1	P O2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PSO1	PSO2	PSO3
CO1	**3**	**2**	**3**	**2**	**3**	**1**	**-**	**2**	**1**	**2**	**2**	3	-	3
CO2	**3**	**2**	**2**	**2**	**2**	**1**	**-**	**1**	**1**	**2**	**2**	3	-	3
CO3	**3**	**3**	**3**	**3**	**3**	**2**	**-**	**2**	**2**	**2**	**3**	3	-	3
CO4	**3**	**3**	**3**	**2**	**3**	**1**	**-**	**2**	**2**	**2**	**2**	3	-	3
CO5	**3**	**2**	**2**	**2**	**2**	**1**	**-**	**1**	**1**	**2**	**2**	3	-	3

Course Contents:

Unit	Contents	Hours
I	**Instrumentation system**: Types of transducers, Digital and Analog mode of operation, static and dynamic characteristics and performance of instruments. Statistical treatment of measurement of errors, Combination of errors.	6
II	**Different Sensors & Transducers:** Resistive, Inductive & Capacitive Transducers. Potentiometer, strain gauge, LVDT, piezoelectric transducer, Temperature Sensors, Motion Sensors, Pressure sensors, Flow sensors, pH Measurement	6
III	**Smart Sensors:** Digital transducers, Smart sensors, Fiber optic transducer, Image sensors, IC sensor, MEMS sensor, Advance Sensors.	6
IV	**Data Acquisition & Calibration:** Instrumentation amplifier & Signal conditioning, Techniques for grounding & shielding, Industry Standard Bus architecture. Calibration techniques.	6
V	**Actuators:** Pneumatic and Hydraulic control valves. solid state switches, Motor control techniques, Cases studies in Healthcare and Robotics, Advance topics and Case studies	6

First Year Engineering Department

Text Books	1.	Measurement system, application and design: E.D.doeblin, McGraw Hill Kogalcusha
	2.	Electrical & Electronic Measurements and Instrumentation: A.K. Sawhney
	3.	Instrumentation, measurement and feed back : B.E.Jones, McGraw hills
E--Books	1.	Electronic Instrumentation and Measurements Book by David A. Bell
	2.	Measurement, Instrumentation, and Sensors Handbook, Second Edition Electromagnetic, Optical, Radiation, Chemical, and Biomedical Measurement By John G. Webster, Halit Eren
Reference Books	1.	Sensors and Transducers: Patranabis D, Prentice Hall of India
	2.	Bus Architecture Manuals.

First Year Engineering Department

Course Title: **Internet of Things and Its applications**										
Semester	II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	A	01	-	02 Hrs.	02	10	15	-	25	-
Course Code	**VSBTET1TI207** **VSBTET1PI207**									
Teaching Mode	Offline	03 Hrs.			Total	25			25	
Duration of ESE	NA					50				

Course Objectives	To enable students to understand scope of Internet of things in Industry
	To introduce the concept of Internet of things
	To develop and apply Advance method for Implementation of Internet of Things
Course Outcomes	**CO1**:To understand the basics of IoT
	CO2: Analyze various IoT sensors and its technology
	CO3: Recognize and describe the role of Arduino board
	CO4: To understand the Controlling of Hardware with Arduino board
	CO5: Design and development of IoT application with the use of different Technology.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

CO / PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
CO1	3	2	2	2	2	1		-	1	-	2
CO2	3	2	2	2	2	1		-	-	-	2
CO3	3	2	3	2	3	1		2	1	2	2
CO4	3	3	3	3	3	1		2	2	2	2
CO5	3	3	3	2	3	2		1	2	2	3

Course Contents:

Unit	Contents	Hours
I	**Basics of IoT** Definition of "Internet of Things", impact of IoT on society, History of IOT, How IOT works, IOT Applications, Characteristics of IoT, Challenges of IoT, Advantages of IoT, Disadvantages IOT	4
II	**IoT sensors** Various IOT Sensors: Infrared (IR) sensor , Moisture sensors, Light sensors, Water level sensors, Proximity sensors, Gas sensors , Distance Measurement with ultrasonic sensor	4
III	**Arduino board** Introduction to Arduino board, Introduction to IDE software ,interfacing sensors to Arduino board.	4
IV	**Controlling Hardware**- Connecting LED, Buzzer, Controlling servo motor, sensors	4
V	**IOT use cases and applications** Smart homes, wearables, smart city, smart grid, industrial internet, connected health, smart retail, smart farming	4

First Year Engineering Department

Text Books	1.	Samuel Greengard ,The Internet of Things‖ by Samuel Greengard
	2.	Klaus Schwab ,The Fourth Industrial Revolution‖ by Klaus Schwab Author:
	3.	Cuno Pfister Author: Cuno Pfister ,Getting started with Internet of Things
EBooks	1.	IoT and Smart Building Data – by Senseware.
	2.	SkyHook, Everything You Need to Know About LPWAN Location
Reference Books	1.	Cuno Pfister, Getting Started with the Internet of Things: Connecting Sensors and Microcontrollers to the Cloud (Make: Projects) 2018
	2.	Adrian McEwen , Designing the Internet of Things Kindle Edition

First Year Engineering Department

Sr. No.	Name of Experiments
1	Study the fundamental of IOT and components.
2	Familiarization with Arduino software
3	To interface LED/Buzzer with Arduino and write a program to turn ON LED for 1 sec after every 2 seconds
4	To interface DHT11 sensor with Arduino and write a program to print temperature and humidity readings
5	Design and interface water level indicator
6	To interface motor using relay with Arduino and write a program to turn ON motor
7	Measure the Distance Using Ultrasonic Sensor and Make Led Blink Using Arduino
8	To design and develop IOT based agriculture monitoring system
9	Advanced burglar alarm security system with the help of PIR sensor
10	To perform programming for control Home appliances using Arduino with Tinkercad.
11	To interface Digital sensor (IR) with Arduino and write a program to turn ON LED at sensor detection.
Open Ended Experiment	
12	Mini Project

First Year Engineering Department

Course Title: **Basic Electronics**										
Semester	I/II	Teaching Scheme				Evaluation Scheme				
						Theory			Practical	
Term	Odd/Even	Th	Tu	Pr	Credits	TAE	CAE	ESE	INT	EXT
Course Category	ESC	3 Hrs.	--	2 Hrs.	4	10	15	50	25	--
Course Code	**ESBTET3TE109EL** **ESBTET1PI109EL**									
Teaching Mode	Offline	5Hrs.			Total	75			25	
Duration of ESE	2 Hrs.					100				

Course Objectives	To give understanding on how current flows through semiconductor devices and relating this phenomena to the characteristics and operation devices.
	To expose students to the function and application of the diodes, bipolar junction,field effect and CMOS transistors in electronic circuits.
	To demonstrate various Digital ICs and their applications.
	To use appropriate experimentation techniques to evaluate circuit performance.
Course Outcomes	Upon successful completion of this course, student will be able to:
	CO1: Relate operation of diodes and their role in design of various electronic applications.
	CO2: Develop the capability to analyze and design circuits using bipolar transistors.
	CO3: Design and analyze the concepts of feedback and apply the concepts for improvement of performance of amplifier and oscillator
	CO4: Solve the problems on Number system codes and their conversions.
	CO5: Demonstrate the application of combinational and sequential logic circuits.

First Year Engineering Department

Mapping of Course Outcomes with Program Outcomes:

Course Outcomes	Program Outcomes										
	PO 1	PO 2	PO3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11
CO1	**3**	**3**	**2**	**2**	**3**	**2**	-	**3**	-	-	**3**
CO2	**3**	**3**	**2**	**2**	**3**	**2**	-	**3**	-	-	**3**
CO3	**3**	**3**	**2**	**2**	**3**	**2**	-	**3**	-	-	**3**
CO4	**3**	**3**	**2**	**3**	**3**	**2**	-	**3**	-	-	**3**
CO5	**3**	**3**	**2**	**3**	**3**	**2**	-	**3**	-	-	**3**

Course Contents:

Unit	Contents	Hours
I	**Semiconductor Devices:** PN junction diode review, Half and full wave rectifiers, Zener Diode, Varactor Diode, Tunnel Diodes,	8
II	**BJT Circuits** BJT transistors- structure, Operations & characteristics, voltages and currents equations, CE, CB, CC configurations, Early Effect, Introduction to Feedback Amplifiers,	8
III	**Amplifiers & Oscillators** Classification A, B, AB, C, Efficiency, Classification of Oscillators, Design of RC, LC and Crystal Oscillators.	8
IV	**Number Systems & Boolean Algebra** Decimal, binary, octal, hexadecimal number system and conversion, Boolean laws,, De-Morgan‟s theorems, Logic Gates , K Maps	8
V	**Combinational & Sequential Circuits:** Introduction to combinational circuits, decoder, encoder, multiplexers & De-multiplexer, flip-flops, Registers	8
